ESCAIDE 2023 in numbers

3780 **Registrations,** representing 127 countries

2192 **Online only attendees**

795 **In-person attendees**

2963 **Active participants** on the web and mobile app during the conference to view sessions, add new contacts, bookmark info-stands, etc.

57 **Sessions,** discussing the latest scientific research and challenges in infectious disease epidemiology, public health microbiology and related scientific fields.

+290 **Speakers and moderators** involved in plenary sessions, fireside sessions, poster tours and side-events.

2967 **Comments, questions, polls and messages** exchanged during the conference.

ESCAIDE 2023 Programme

Programme

Plenary sessions at ESCAIDE provide an opportunity to discuss public health challenges and scientific advances, bring together experts in cross-cutting fields to enable evidence from infectious disease research and epidemiology to be translated into improvements in public health. The content of the plenaries is proposed by the ESCAIDE Scientific Committee (11 cross-field members), who invite high level speakers to deliver inspiring presentations and address questions from the audience. There were five plenary sessions at ESCAIDE 2023, developed and chaired by the ESCAIDE Scientific Committee.

Plenaries				
Broadening the horizon: Revisiting the concept of 'prevention' for communicable diseases	**Digital transformation and Artificial Intelligence**	**Wastewater surveillance: a magic bullet or just one piece of the puzzle?**	**One Health: Tackling global health challenges together**	**Post-pandemic Public Health workforce**

ESCAIDE

ecdc
EUROPEAN CENTRE FOR DISEASE PREVENTION AND CONTROL

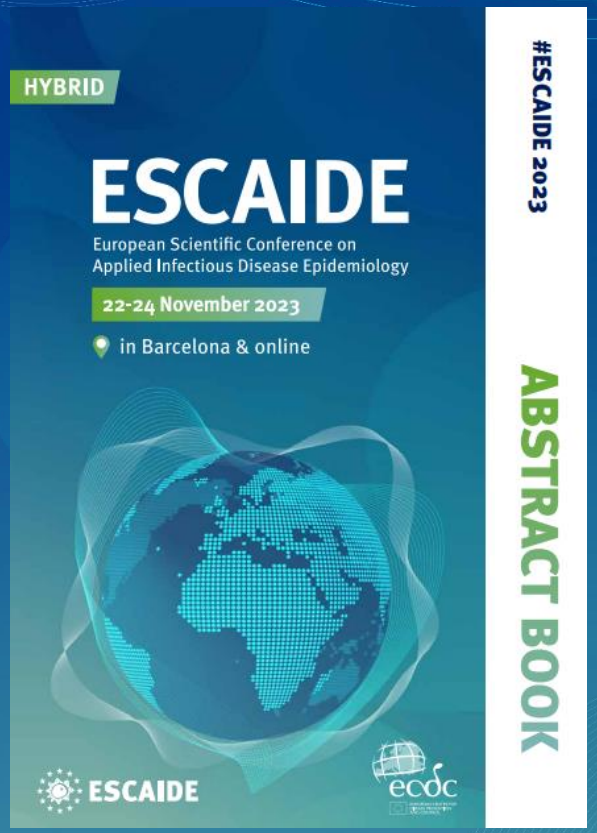
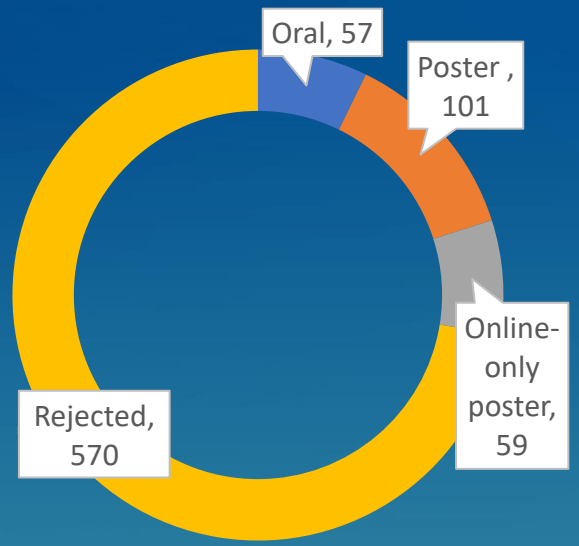
Programme

ESCAIDE 2023 received 908 abstract submissions, a notable increase from previous years. Of these, 67 were selected for oral presentations and 112 for poster tours, while 59 featured as online-only posters. The acceptance rate was 26.21%, a decrease compared to 36% in 2022 and 48% in 2021 and 2020, mainly due to the surge in submissions. We have excluded the online-only posters as a possible format for late breakers due to lack of interest expressed by a few authors in the format. As a result, it will be discontinued in future conference editions.

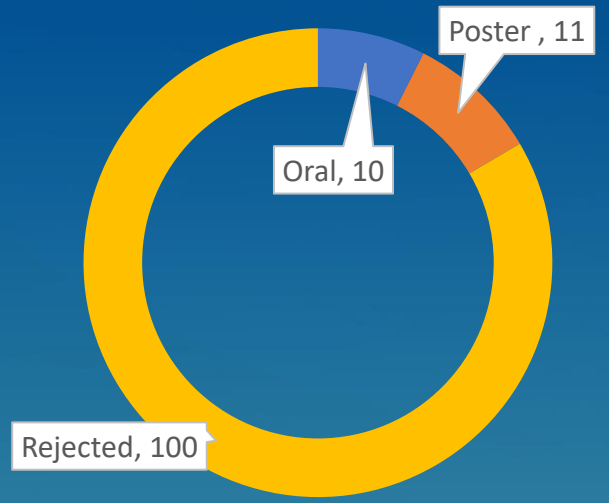


Standard call



Total submitted: 787
Total accepted: 158

Late breaker call



Total submitted: 121
Total accepted: 21

Abstract book ESCAIDE 2023

Programme

Abstracts are submitted to ESCAIDE and reviewed by a group of reviewers and the Scientific Committee. Those selected represent the latest in cutting-edge research from a broad spectrum of fields including infectious disease epidemiology, microbiology, surveillance, implementation science, modelling, preparedness and more. Chosen abstracts are prominently featured in two formats: as interactive oral presentations during Fireside sessions, or as visual displays in Poster tours and via online-only posters. The program featured expertly moderated Fireside sessions and Poster tours, offering presenters a platform to provide in-depth insights into their work and engage in dynamic Q&A sessions with the audience.

Abstract presentations

11 Fireside sessions (67 oral presentations)	24 Poster tours (112 poster presentations)	59 Online-only posters

Citizen science as an effective tool to detect the tiger mosquito (Aedes albopictus) in Belgium
INTRODUCTION & OBJECTIVES
METHODS
RESULTS
CONCLUSION

Interrupted timeseries analysis
Laboratory confirmed Salmonella notifications 2015-2021
Interrupted timeseries analysis
Using negative binomial regression modelling
Weekly case counts of laboratory confirmed Salmonella notifications 2015-2021
Modelling accounted for seasonality and secular trend
Interruption as binary variable distinguishing periods before and after 12 March 2020
Investigated impact on subsets
Hospitalised cases
Serotypes: S. Enteritidis, S. Typhimurium (incl. S. monophasic Typhimurium)
Age groups (years): 0-14, 15-44, ≥45
ESCAIDE
2023
ESCAIDE

Programme

ESCAIDE side-events aim to seed discussion on topics that were particularly relevant during the year, or to showcase relevant work done in a certain field. These events can adopt a variety of formats, such as presentations, trainings, workshops, symposia, and debates. They are organised by third parties, who are given latitude to experiment with form and content.

Side-sessions and events

Pre-conference events at Public Health Agency of Catalonia	ESCAIDE Day 1	ESCAIDE Day 2	ESCAIDE Day 3
Multidisciplinary simulation exercise on producing scientific advice ***Organised by:*** ECDC Scientific Processes and Methods team	**Career Compass:** Q&A session about the different career paths of established public health professionals ***Organised by:*** EPIET Alumni Network (EAN)	***Eurosurveillance* Seminar:** Changing urban environments and impact on infectious diseases epidemiology, surveillance, prevention and control. ***Organised by:*** *Eurosurveillance Journal*	**Side session 5: "**#OutbreakAlert An unknown disease has been reported in…": technological advances taking us from local headlines to public health intelligence ***Organised by:*** ECDC and WHO Pandemic Hub
Eurosurveillance workshop: Improving your chances to get published ***Organised by:*** *Eurosurveillance Journal*	**Side session 2: Social Sciences Session:** The history of infectious disease pandemics in Europe: what are the lessons for prevention and control measures ***Organised by:*** John Paget	**Side session 3:** New initiatives on integrated surveillance under the European Health Union and the SCBTH regulation ***Organised by :*** DG SANTE, European Commission	**Side session 6:** Escape room on Migration and Health ***Organised by:*** PROSICS- Barcelona, Programa de Salud Internacional de l'Institut Català de la Salud
		Side session 4: Risk communication, community engagement and infodemic management (RCCE-IM) can save lives: success stories ***Organised by:*** Technical Advisory Group on RCCE-IM, WHO-EURO	
		BarCamp ***Organised by:*** EPIET Alumni Network (EAN)

ESCAIDE

Programme

In addition to a robust scientific agenda, ESCAIDE 2023 featured a variety of events. The opening day included a networking cocktail event. For a midday energy boost, Georgia Ladbury hosted group singing sessions on Wednesday and Friday, highlighting the well-being benefits of communal singing. Additionally, on Wednesday and Thursday, groups of 35 had the opportunity to visit the nearby Museu Nacional d'Art de Catalunya, renowned for its Romanesque murals, Modernist works by Gaudí and Casas, Gothic art, European masterpieces by Tiziano and Velázquez, and a broad photography collection.

Registrations

Overview of online and in-person registrations and participation

Registrations

3780
Registrations in total

2908
(716 no-shows, 25%)
Online registrations

2192
Unique online attendees

872
(77 no-shows, 9%)
In-person registrations

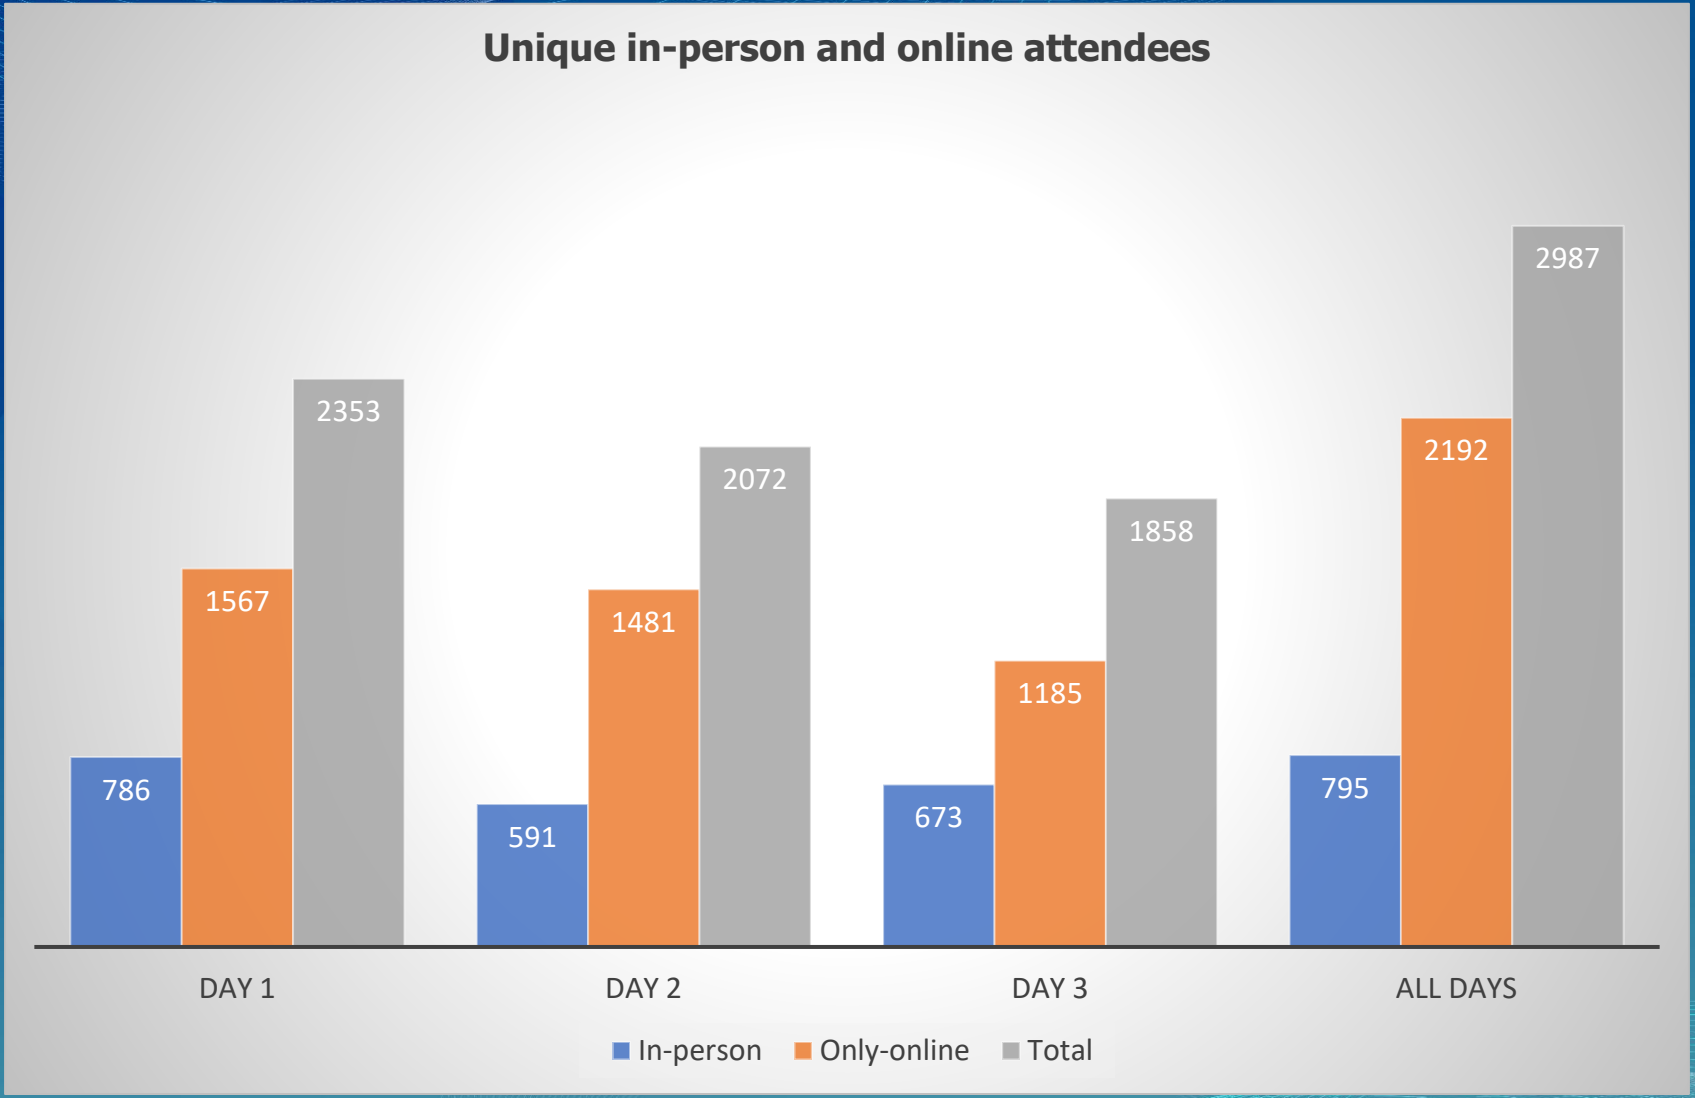
795
Unique in-person attendees

ESCAIDE 2023 had 3780 sign-ups, both online and in-person, outdoing last year's 3031 registrations, of which 2402 were for online attendance and 629 for in-person.

For ESCAIDE 2023, there were 2908 online-only registrations, and 872 signed up to attend in person. The event saw 77 no-shows for the in-person and 715 for online, resulting in 795 unique in-person attendees and 2192 online participants.

In-person registration for the conference closed early due to full capacity reached in August, and we could only accommodate about 25% from the waiting list. To manage the high demand, we asked those unable to attend to inform us and expanded budget to allow for more in-person participants.

Attendance



ESCAIDE 2023 saw 795 in-person attendees and 2192 attendees joining exclusively online. Daily numbers fluctuated, with about 600-800 people at the venue and 1100-1600 online each day.

The number of participants engaging on the online platform is greater than 2192 as this doesn't include attendees who were present in person and also joined online. The figure of 2192 represents only the purely online attendees.

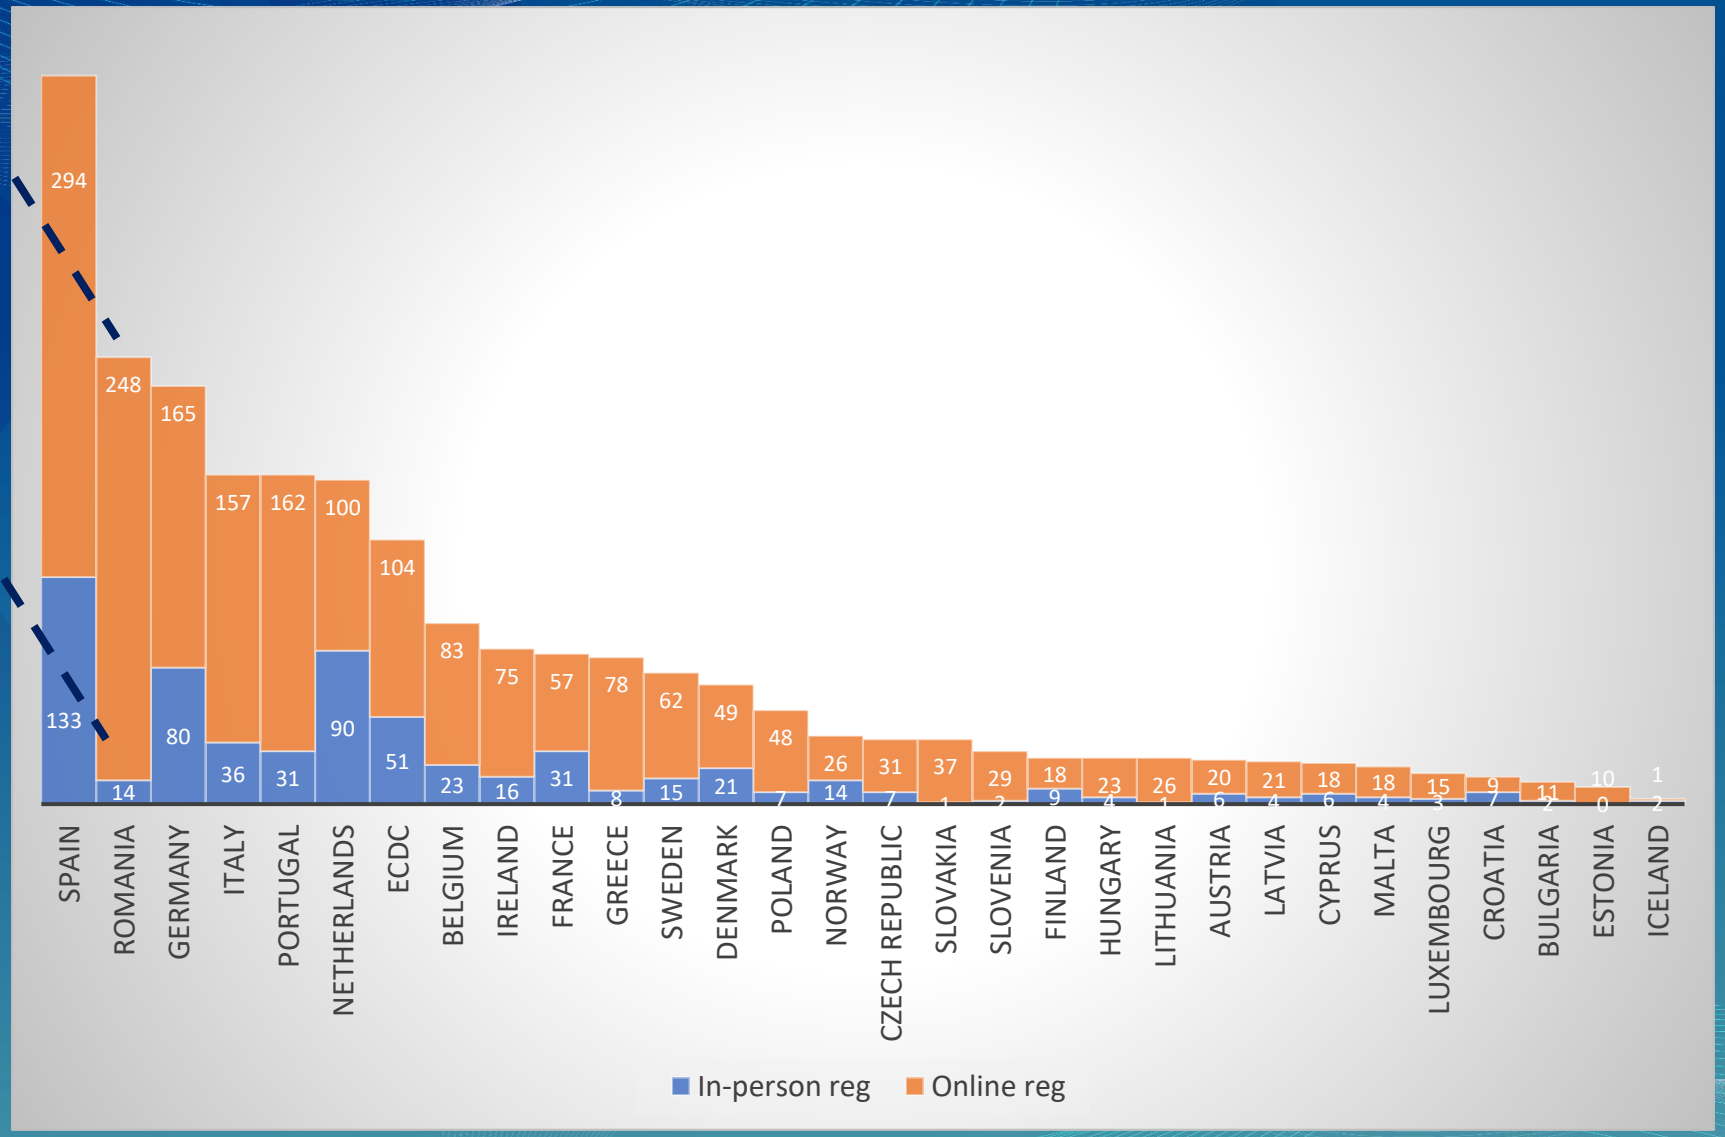
Country representation

127 Total countries represented	**69** Countries represented in-person	**28**	EU/EEA countries
		41	Outside EU/EEA countries
	123 Countries represented online	**29**	EU/EEA countries
		94	Outside EU/EEA countries

ESCAIDE 2023 registered participants indicated they were from 29 countries inside EU/EEA (2623) and from 98 countries outside EU/EEA (1144).

Like recent years when ESCAIDE was held online twice and as a hybrid event last year, this year's hybrid format with online participation has continued to enable broader attendance, welcoming those who might not join under usual circumstances due to costs, travel constraints, and similar barriers.

EU/EEA countries representation

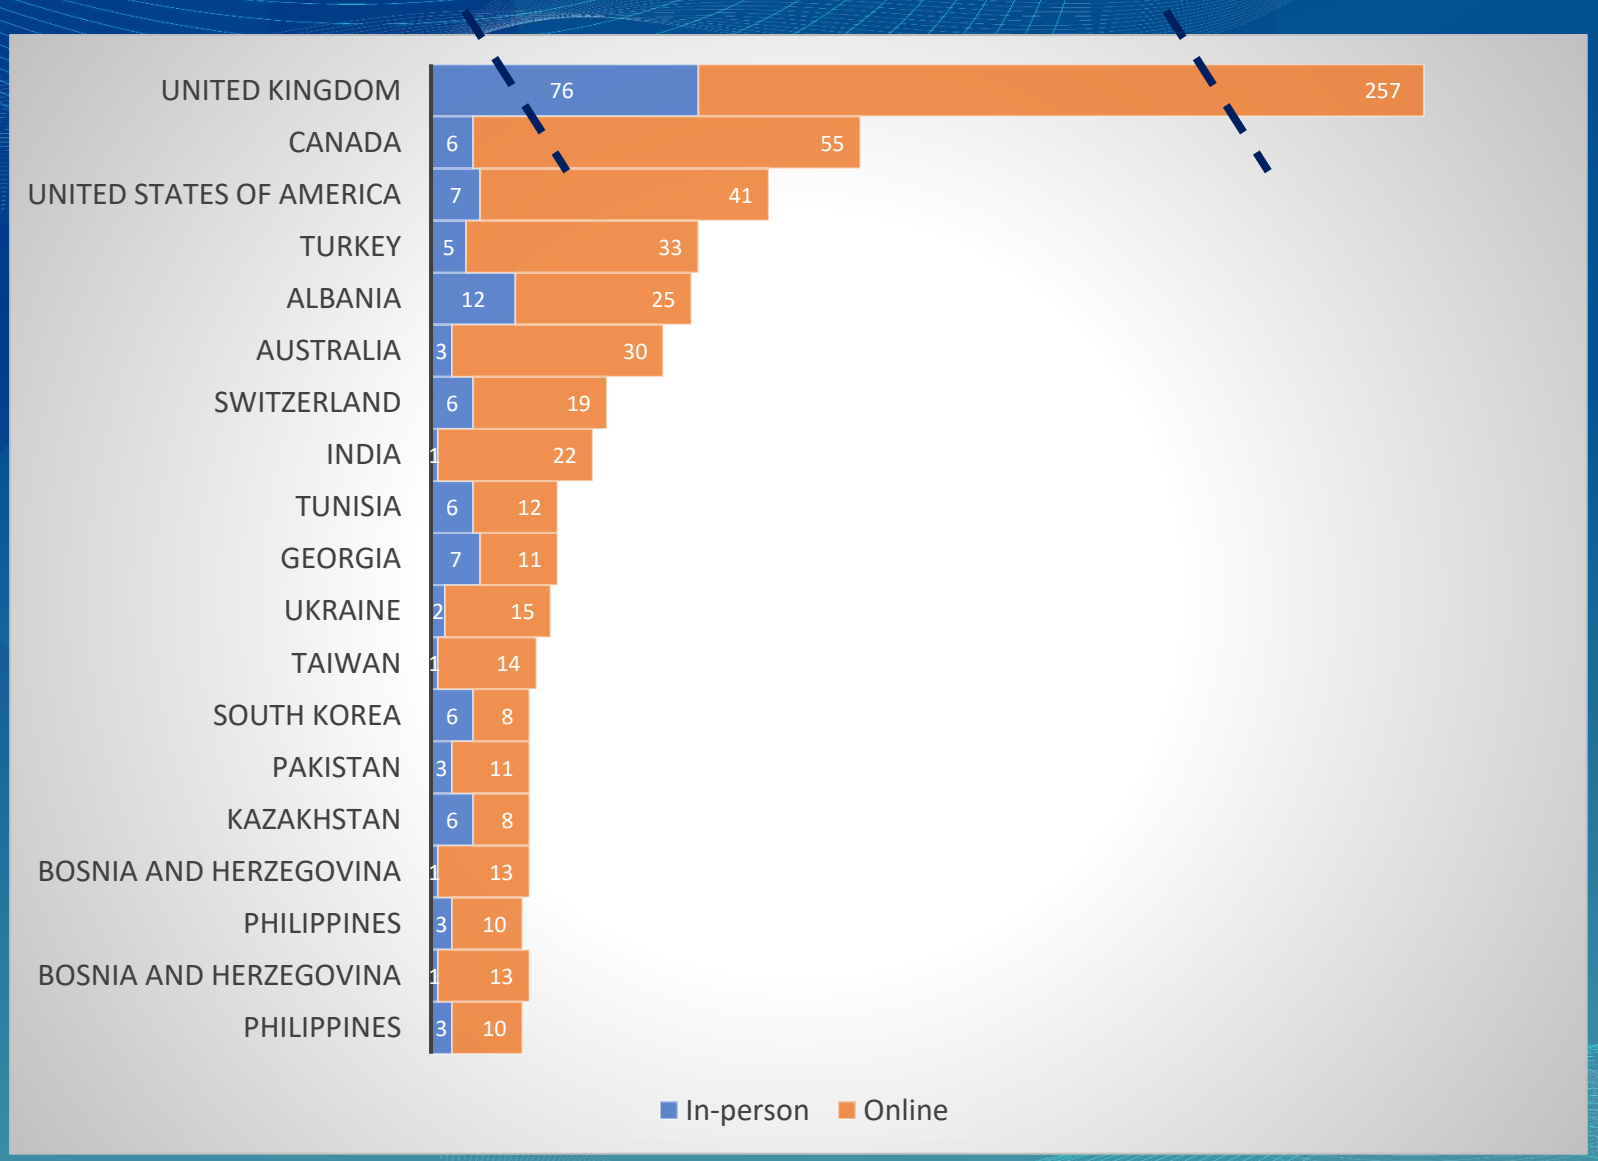


Participants registered either online or in-person from all 27 countries in the EU, along with Norway and Iceland.

Spain, which hosted the event, filled its in-person quota by July with 133 attendees, leading many to join online instead. The Netherlands had 90 in-person attendees, and Germany had 80.

Romania and Italy showed a significant preference for online engagement, suggesting distance, travel costs, or convenience as determining factors.

Outside EU/EEA representation



There are 79 countries from which less than 10 participants registered (total online and in-person) to ESCAIDE, not represented in this graphic.

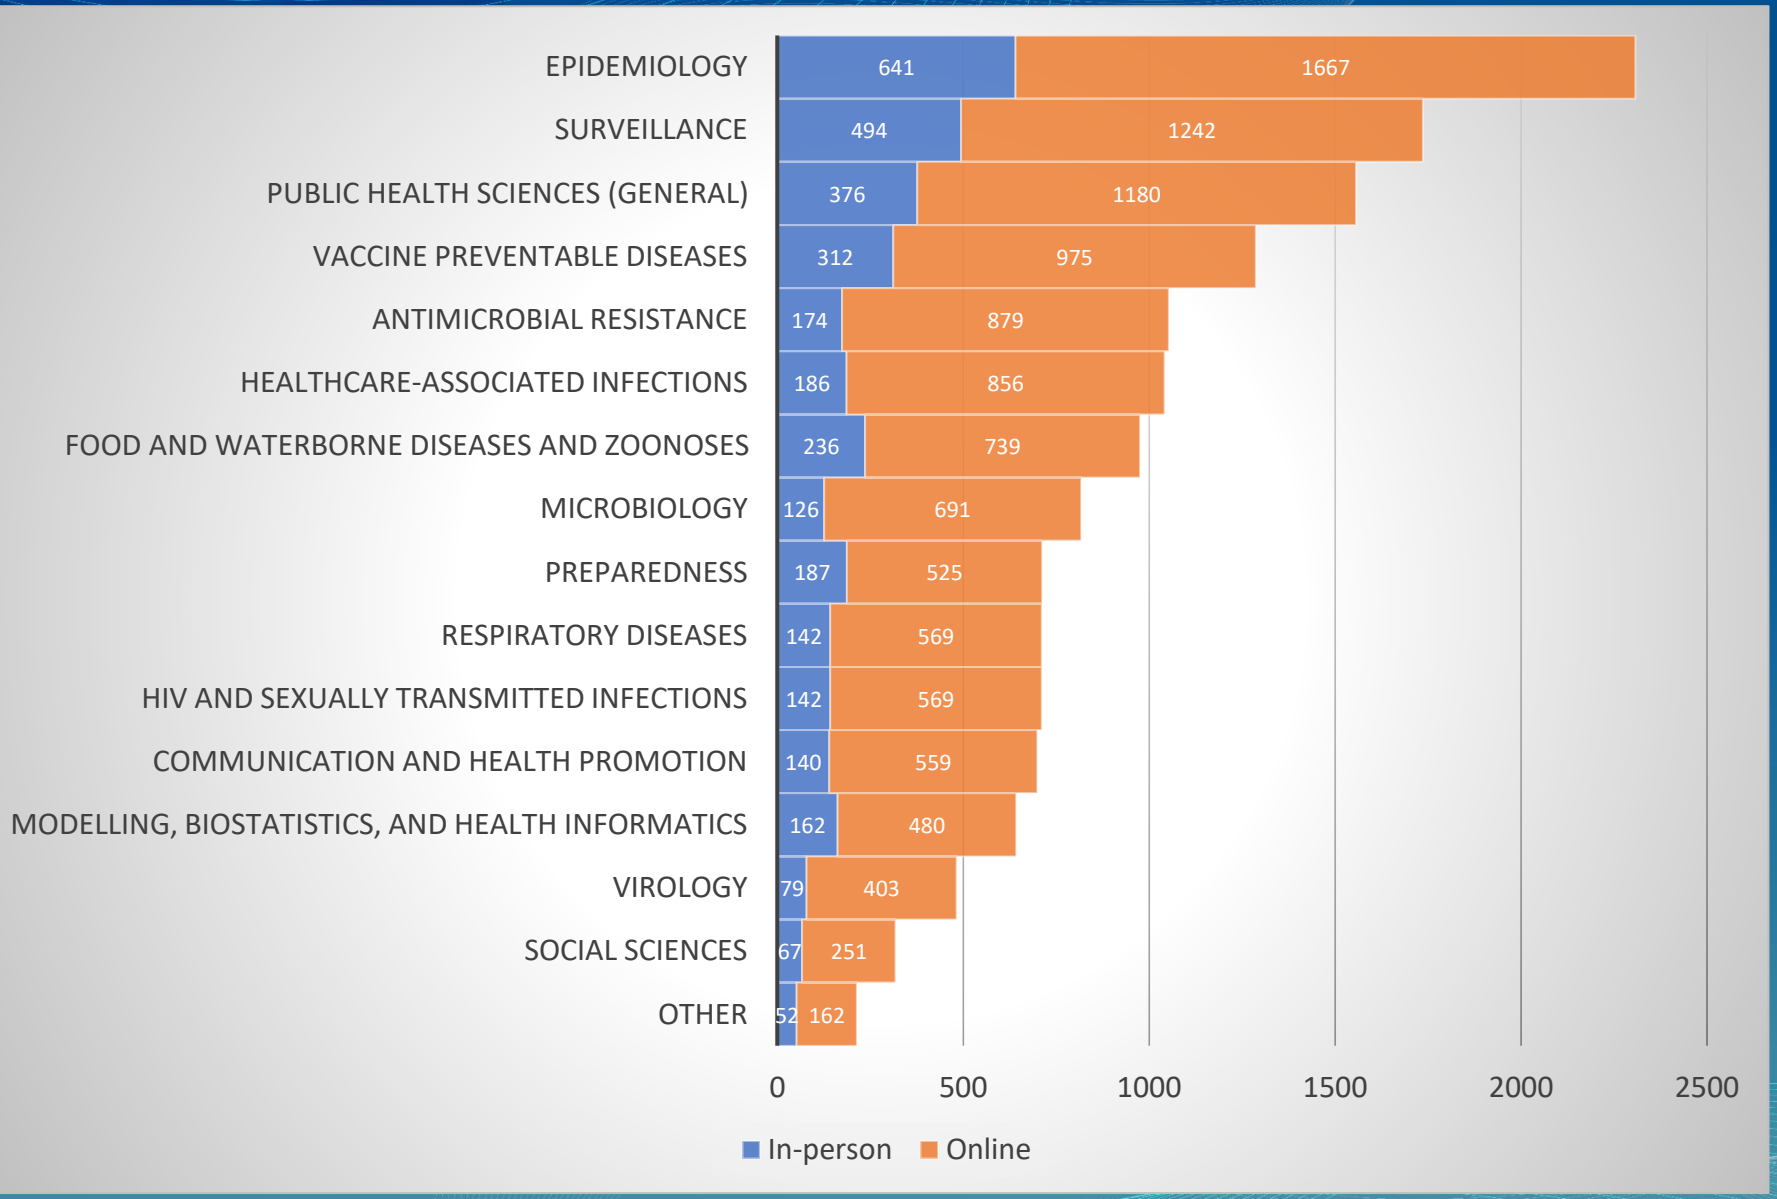
Participants by field of expertise



Participants selected fields that best matched their expertise: in total, amongst online and onsite participants, 2308 chose epidemiology; 1736 selected surveillance; 1556 identified with generic public health sciences 1287 with vaccine-preventable diseases, and 1050 with antimicrobial resistance.

214 participants also indicated 'Other' fields of expertise and specified them in a free text box.

Description of the session
Information
sion aims to reflect on the scope of the concept ention' and its complexities, as well as how it to preparedness. The audience will hear from a diverse panel of experts about the challenges, potentials and lessons learned from different disease areas – including non-communicable diseases – and the application and relevance of social and behavioural sciences in communicable disease prevention. The session will also explore the role of Public Health professionals in defining and addressing diverse prevention needs in different population

Question
4
We often talk about prevention programmes, particularly vaccination, as being able to reduce inequalities. But depending on how the programmes are delivered, prevention programmes can actually widen health inequalities (as under-served group can be left behind). How can we avoid this?

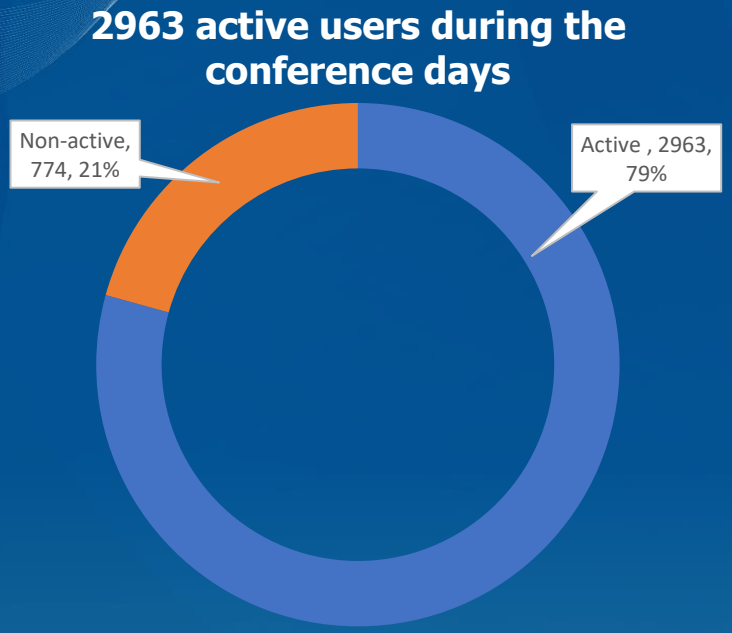
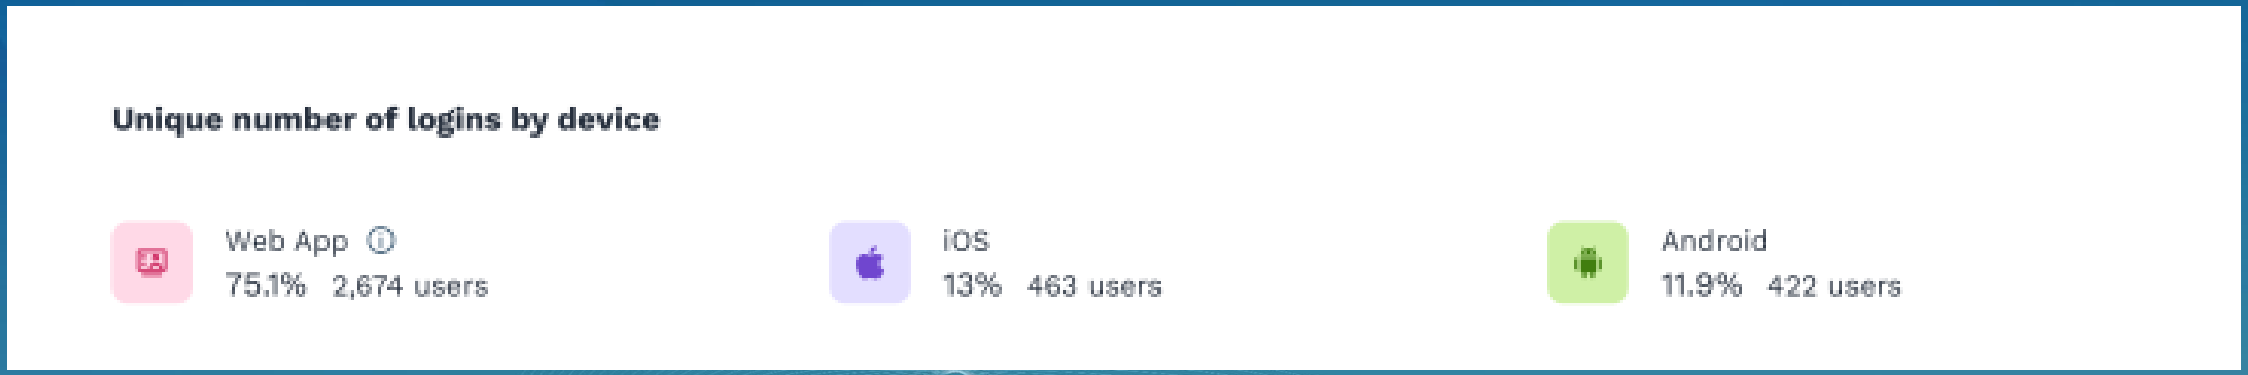
Mobile and web app usage

From the total of 3780 registered participants, 2963 logged in during the conference days and engaged in the platform by viewing sessions, adding new contacts, bookmarking info-stands or registering to sessions.

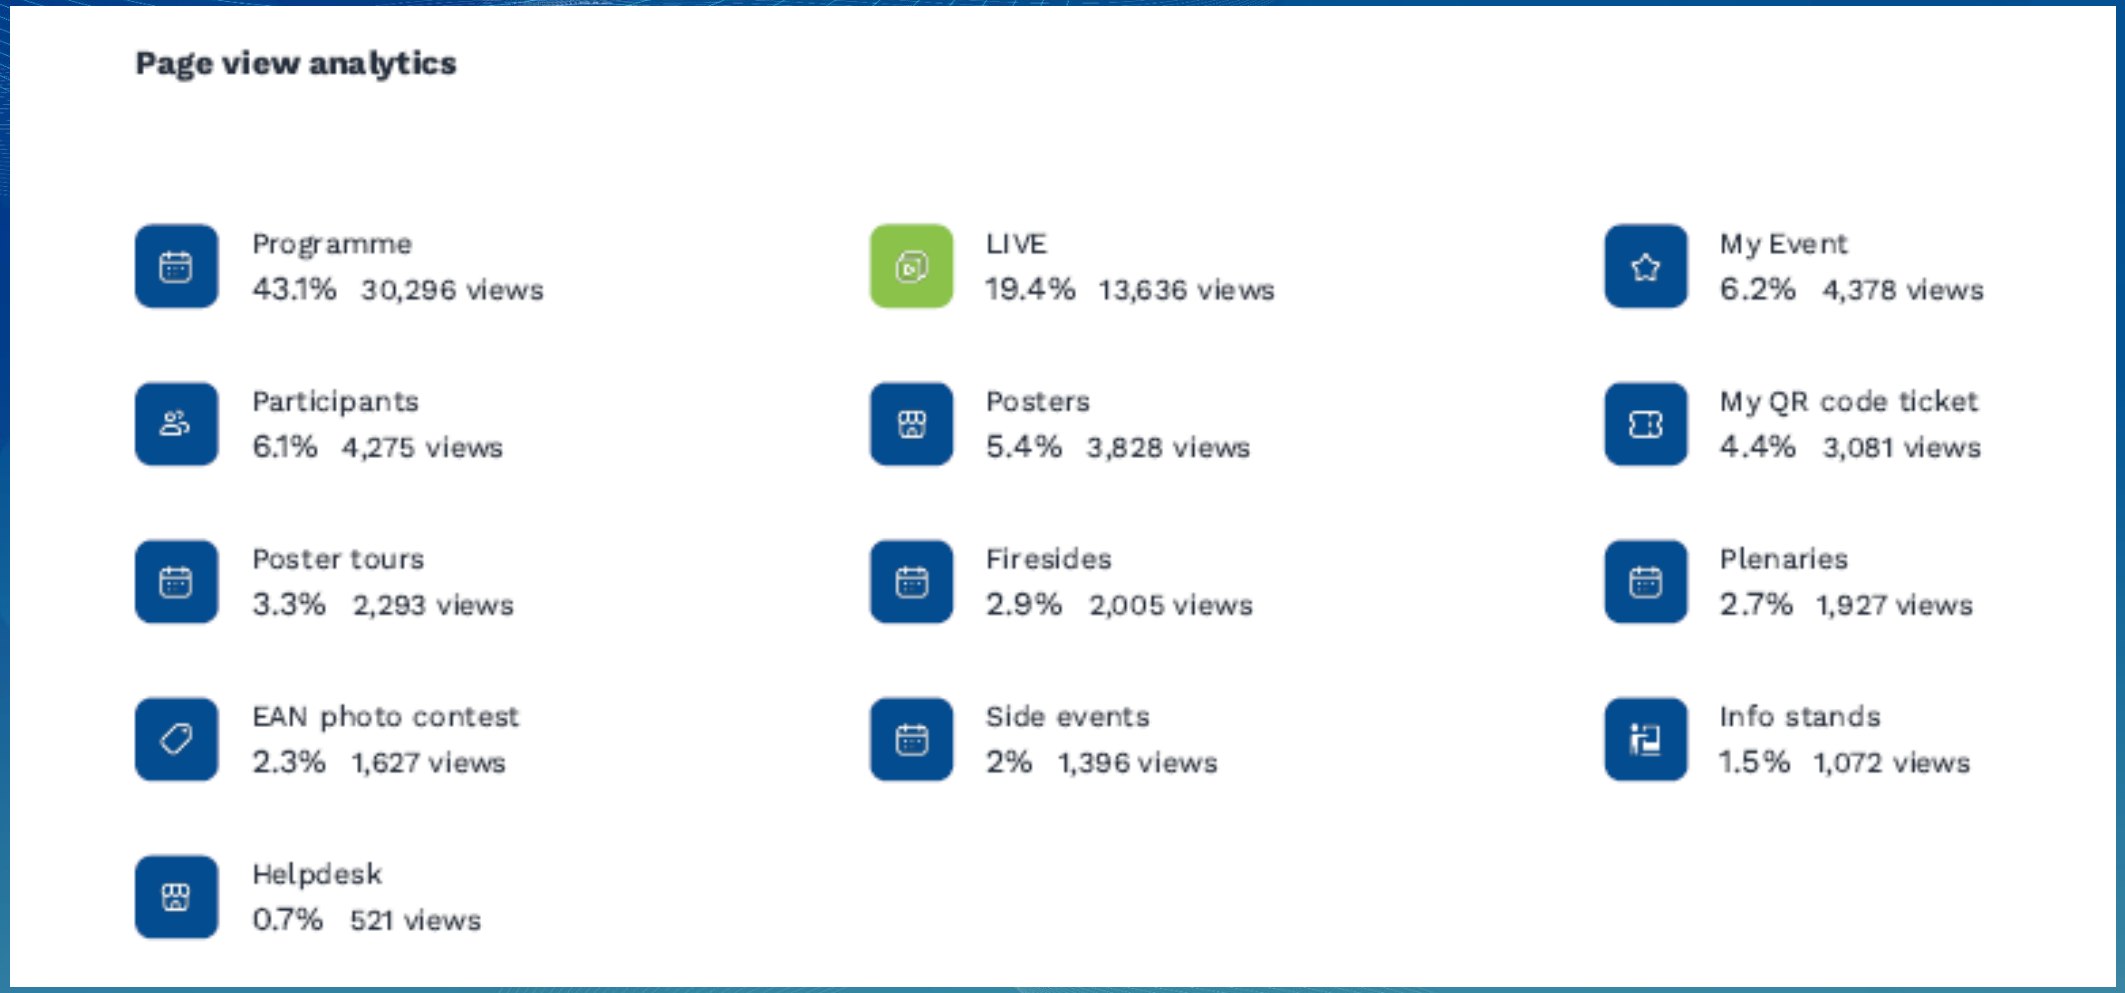
It seems that 774 users registered to ESCAIDE 2023 but did not log in to the app during the conference days. Some may have been present physically without using the app, while many were likely digital no-shows.





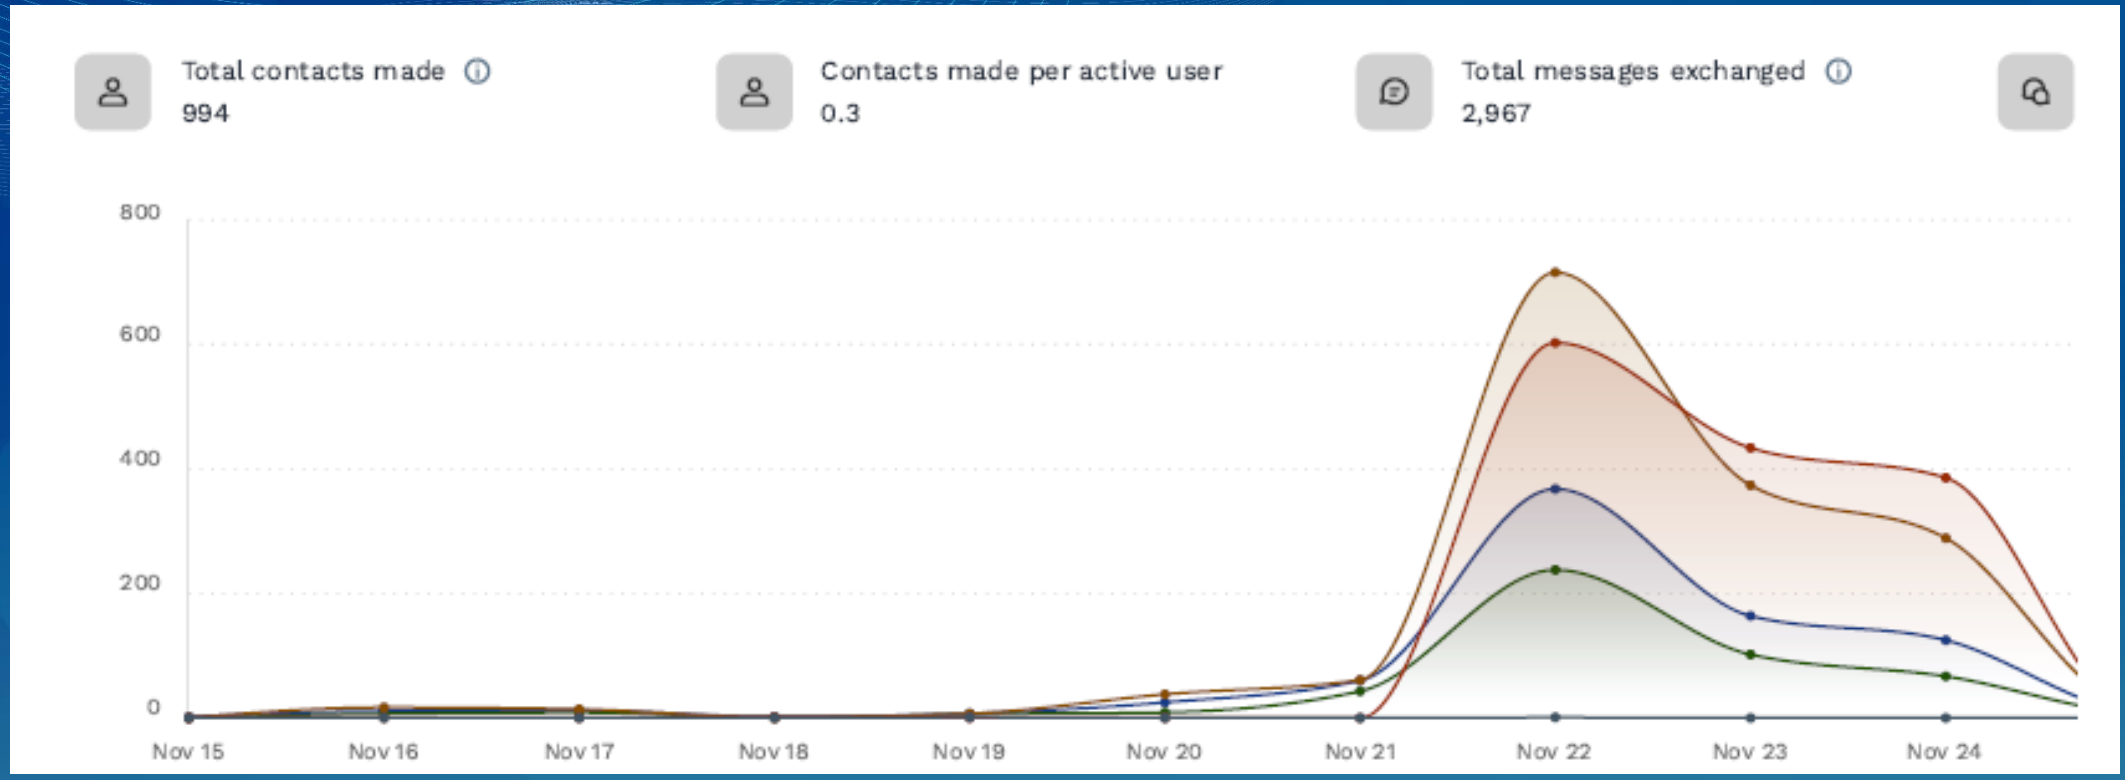
The majority of participants (2674) accessed ESCAIDE online via the Swapcard Web App (75.1%). The mobile App had an average usage of 24.9%, where 13% accessed via an iOS device and 11.9% via Android.

Mobile and web app usage



The "Programme" page was the most frequented feature by participants, understandably so since it provided easy access to all content. Page views for specific sessions like Plenaries, Firesides, and Side-events were lower as most attendees watched live broadcasts through the "Live" page, where their views were accounted for.

Mobile and web app usage



In general terms, ESCAIDE online created opportunities to establish connections and network. Across the conference, 2967 messages, comments and questions were sent on the mobile and web app. The amount of comments, questions and discussions made in the chat boxes for sessions demonstrates active participation of the viewers.

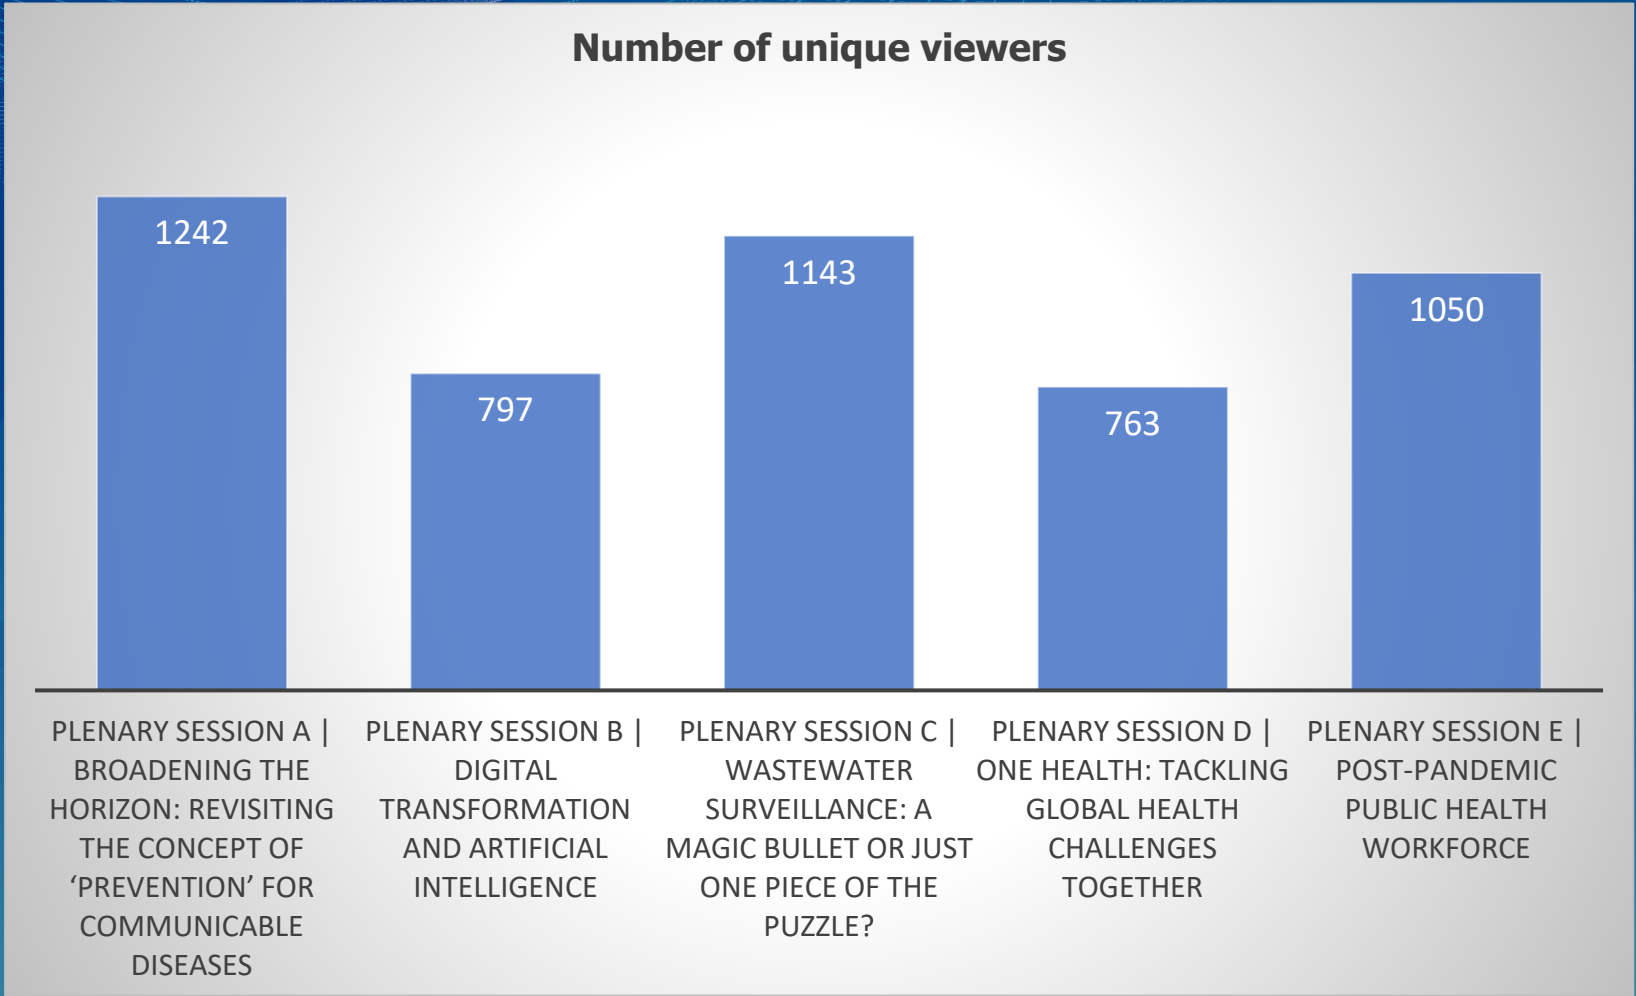
Plenary sessions

ONLINE views



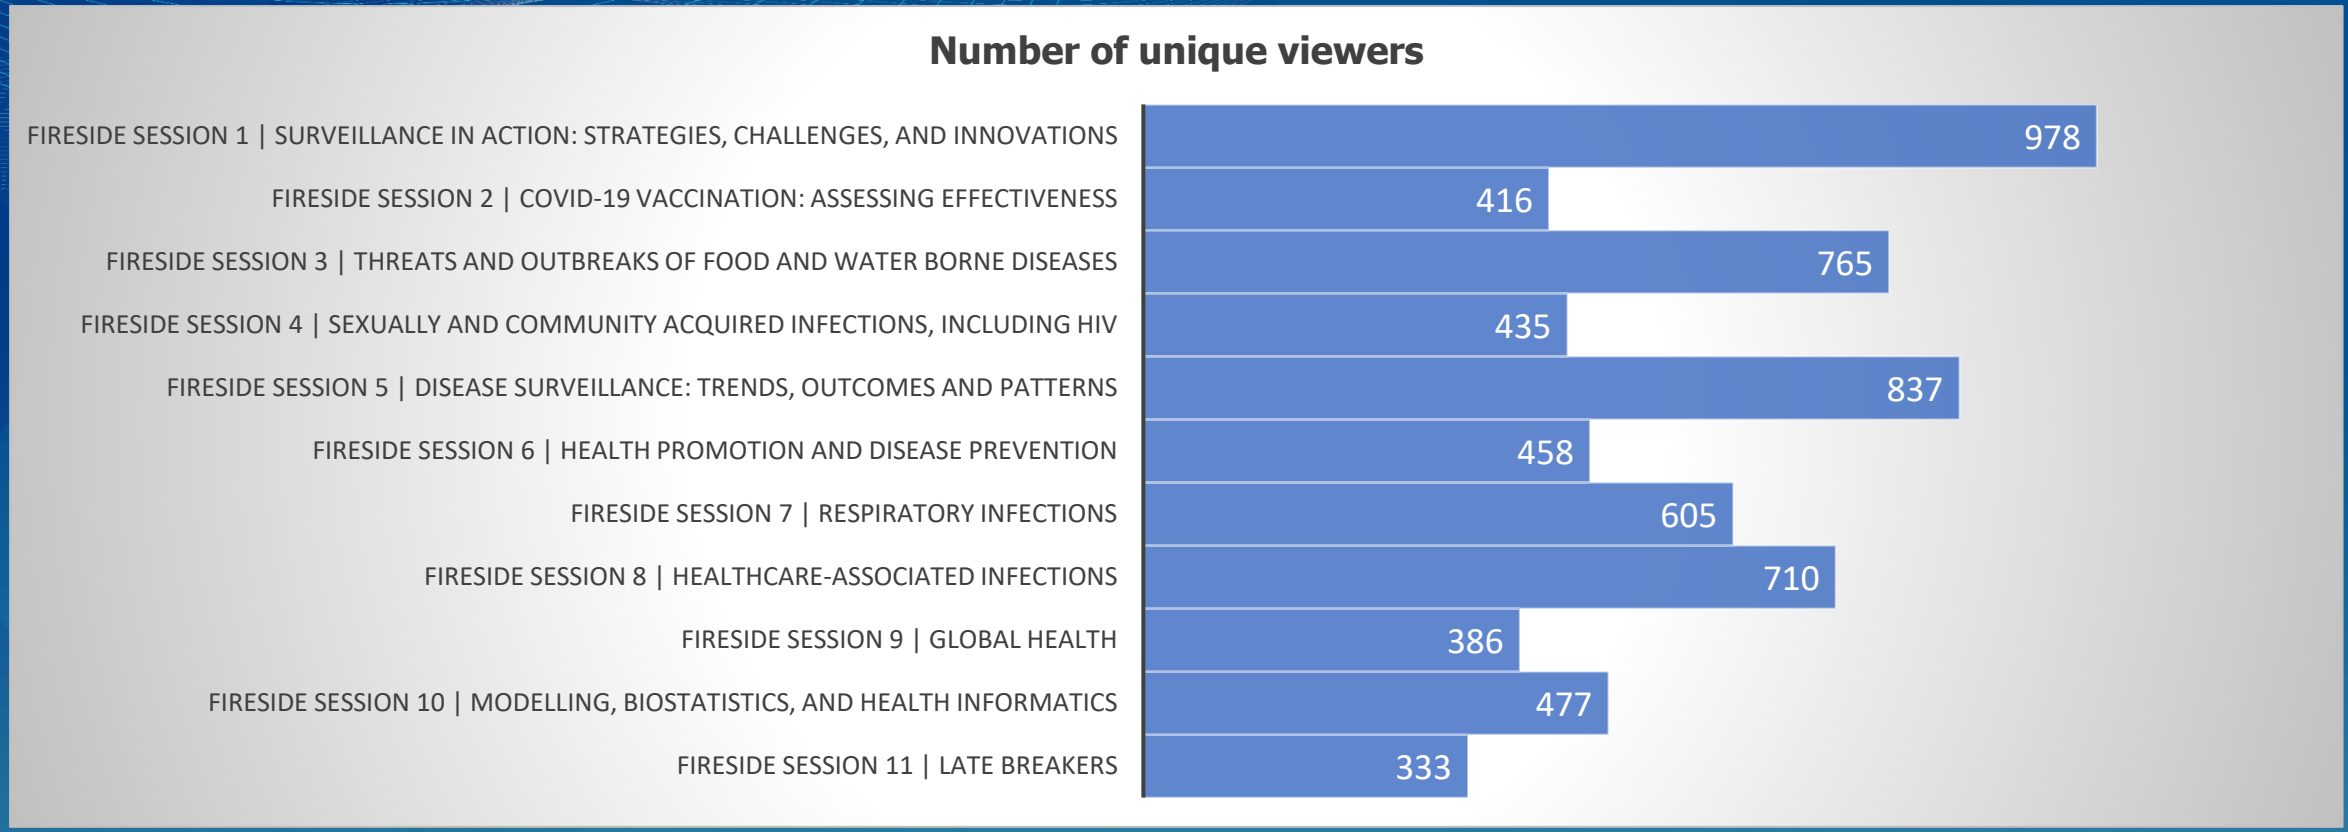
Charts in this section represent the online viewers. Viewers were counted as "unique viewers", which means that even if they watch more than once, that person counts as one unique viewer. Measuring "unique viewers" gives a clearer picture of the audience size.

Plenary sessions took place in hybrid format: they could be viewed either through the web and mobile app, or attended in-person.

The sessions in the morning (Plenaries A, C and E) had more online viewers than the sessions in the afternoon (B and D).

Fireside sessions

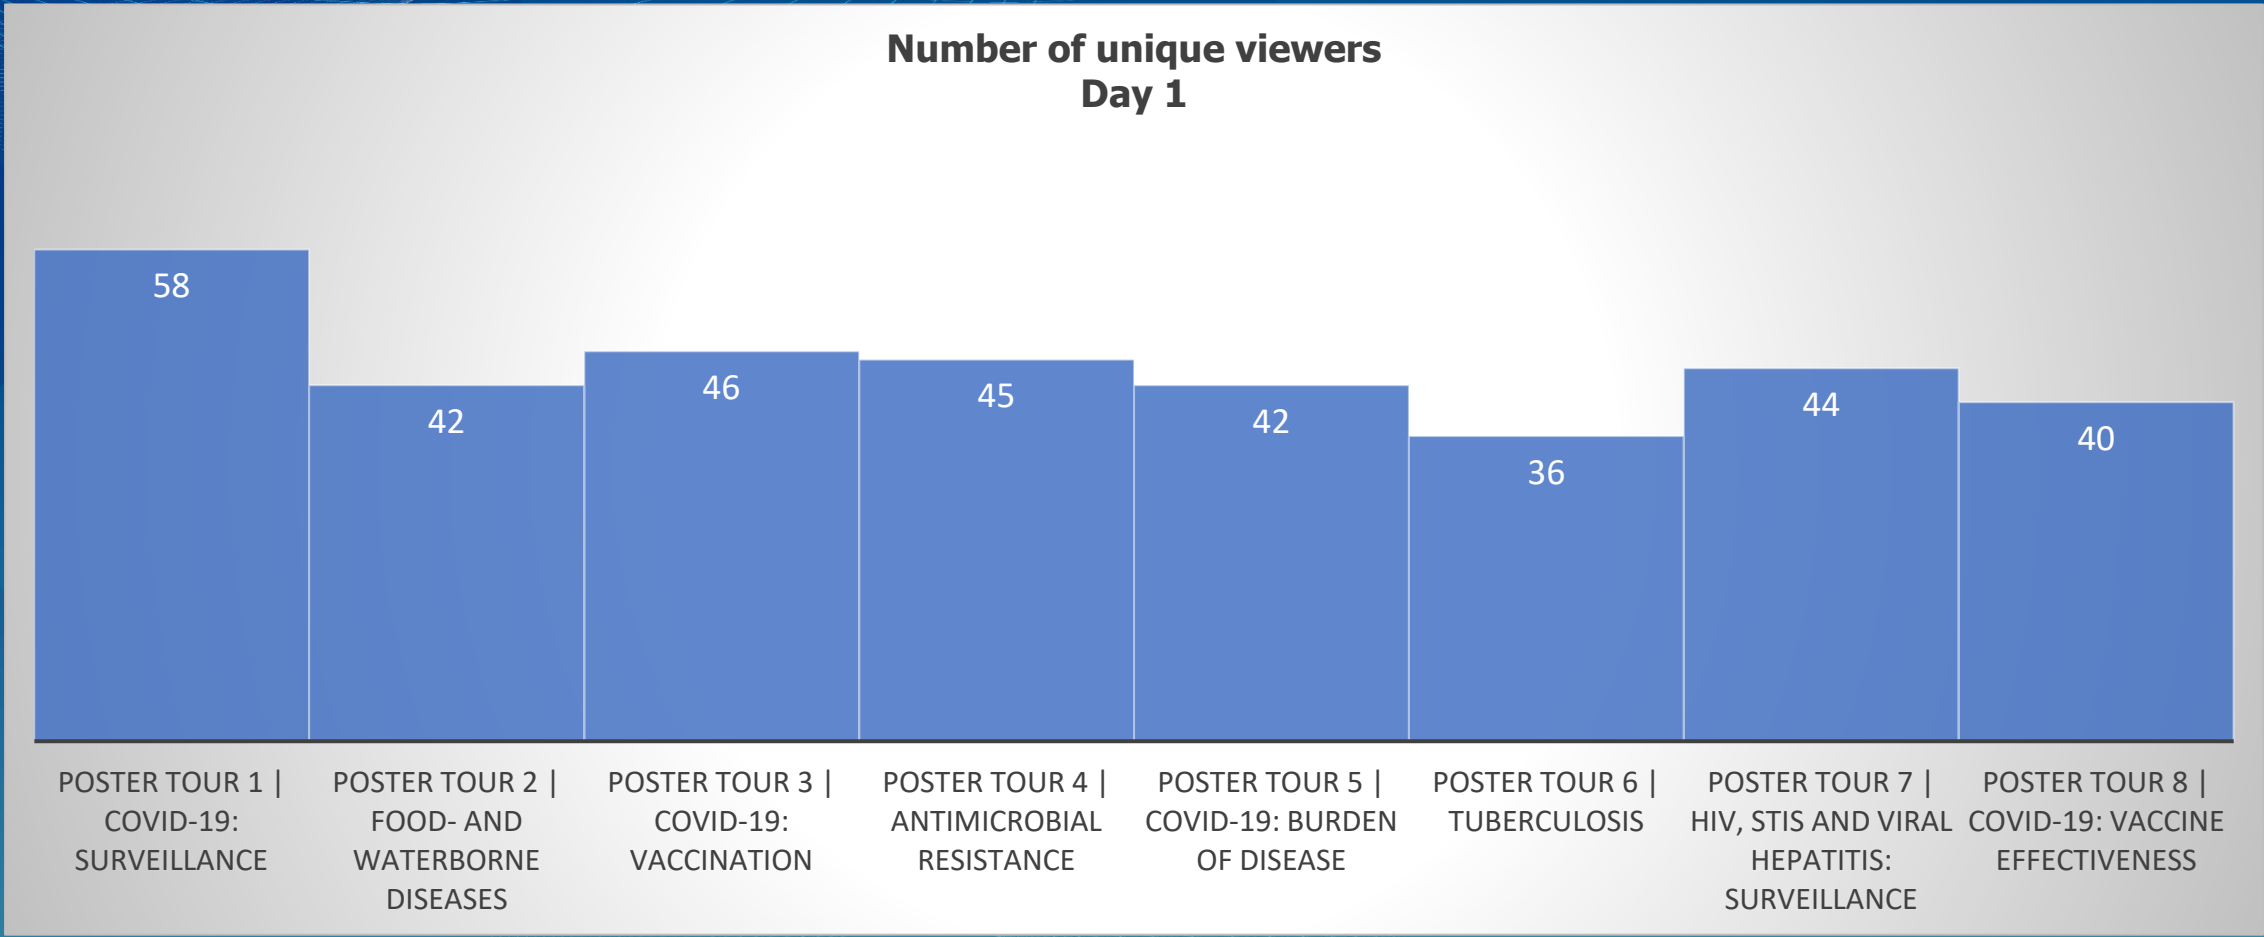
ONLINE views



Fireside sessions were held in parallel, two at a time in hybrid format: they could be viewed either through the web and mobile app, or attended in-person. Those that were listed first on the "Live" page tended to garner more online views, which may be attributed to online users not exploring the page further to discover other parallel sessions.

Poster tours

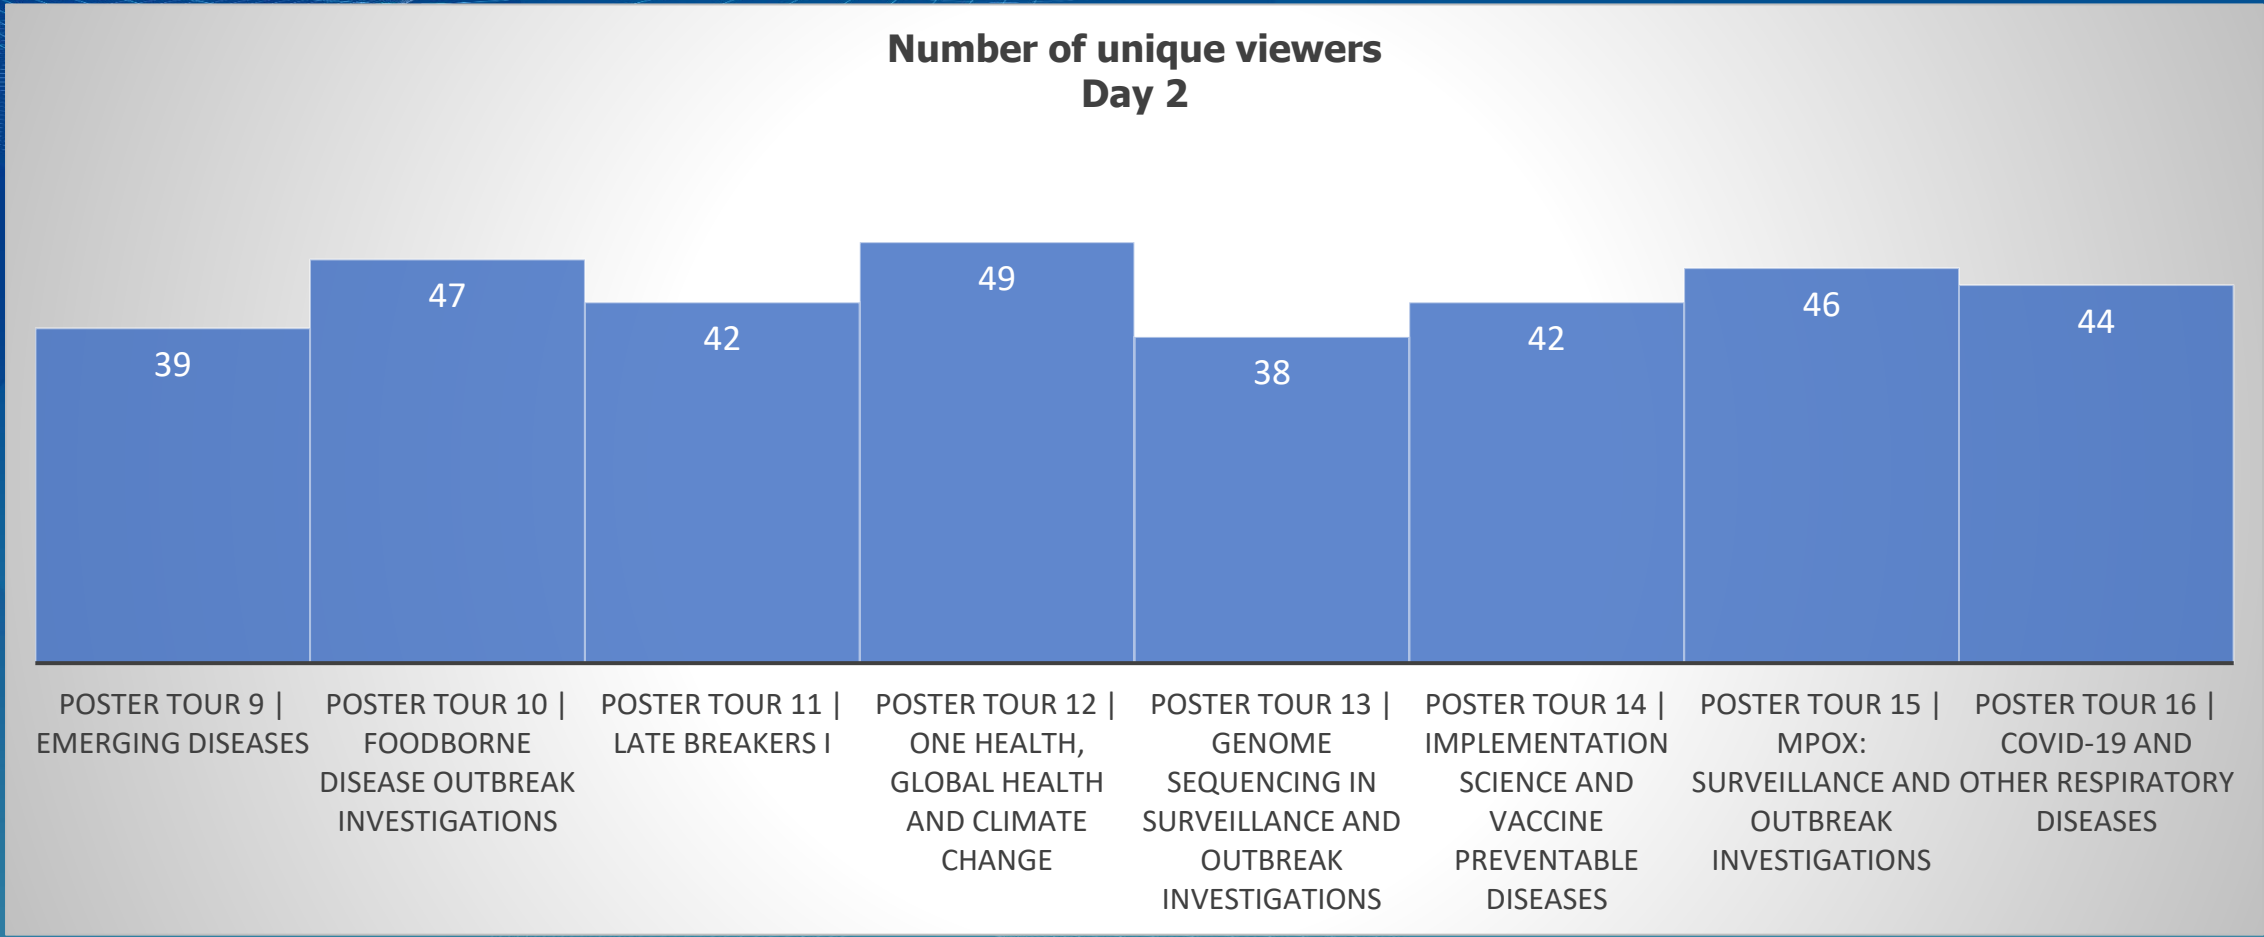
ONLINE views



Poster tours sessions were held in parallel, 8 at a time in hybrid format: they could be viewed either through the web and mobile app, or attended in-person.

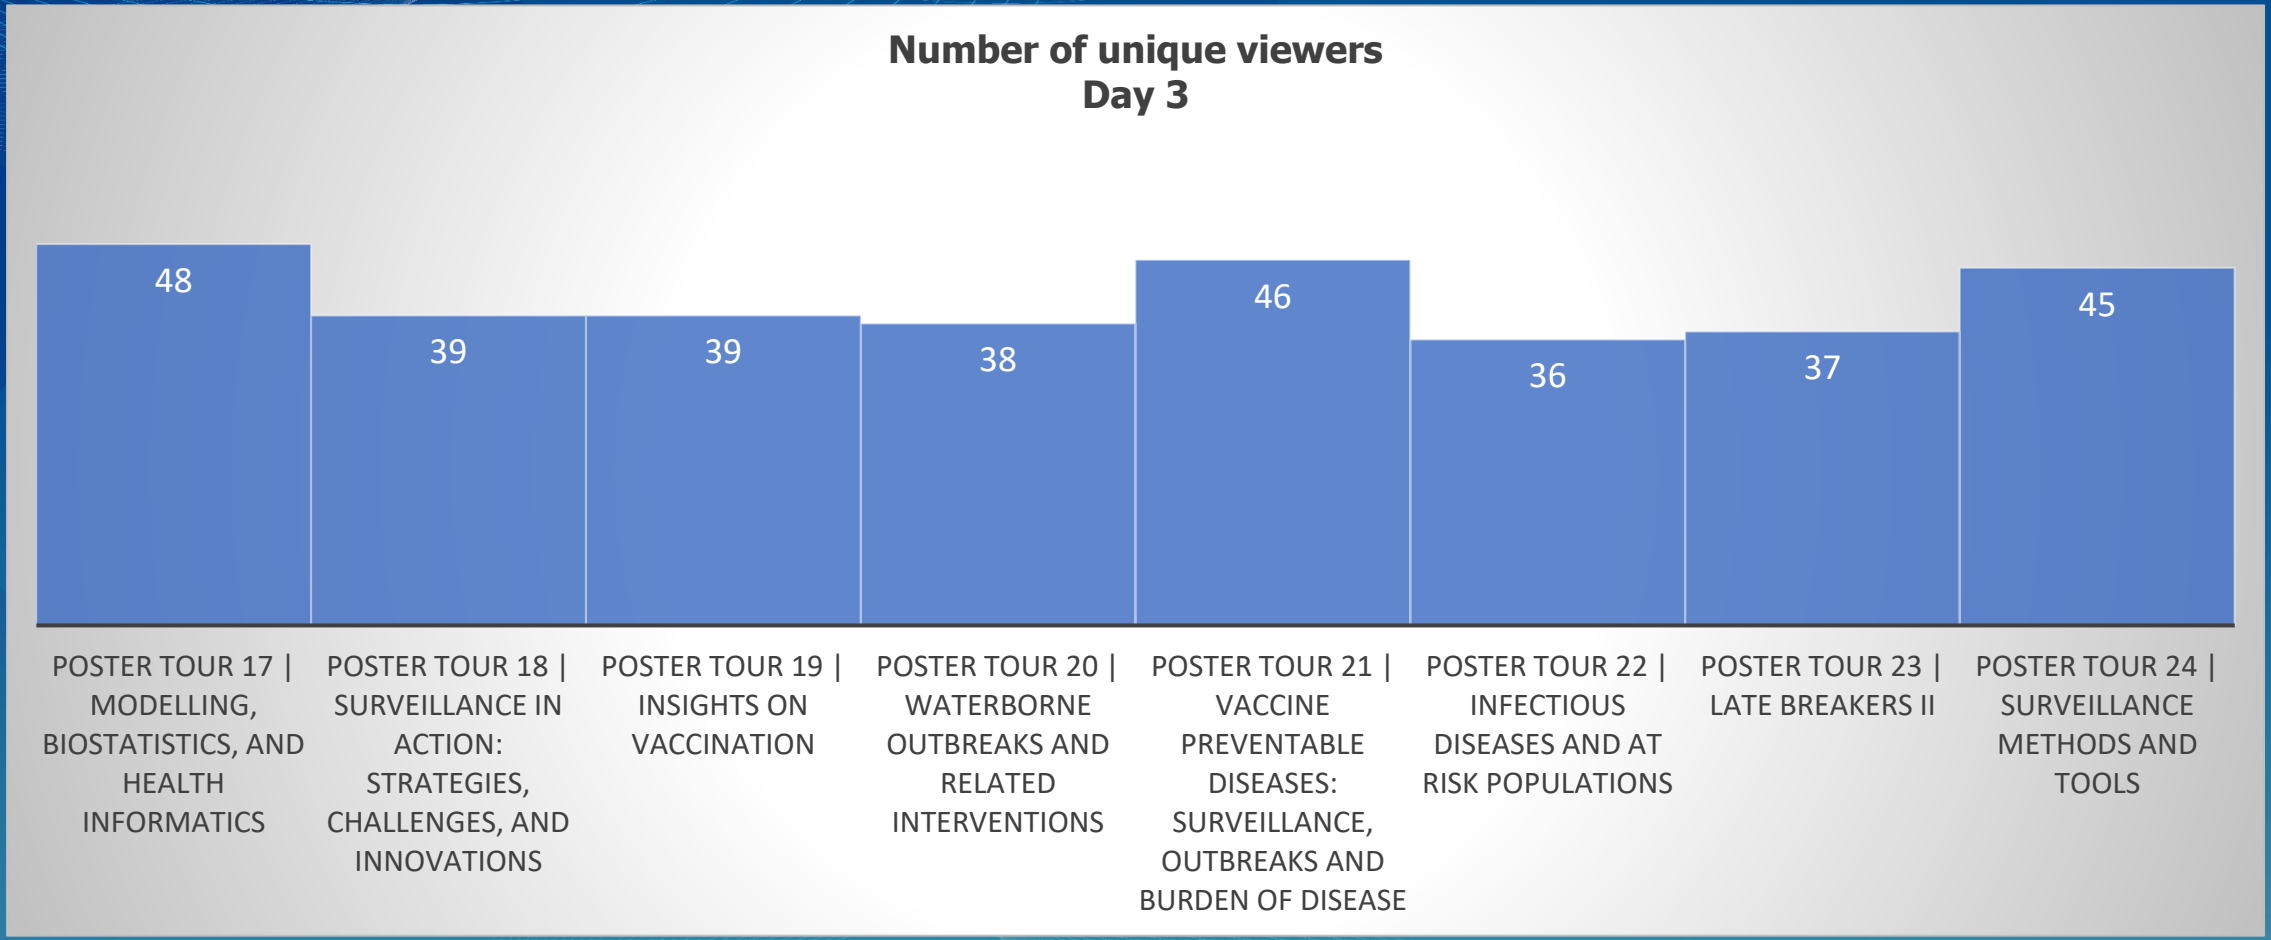
Poster tours

ONLINE views



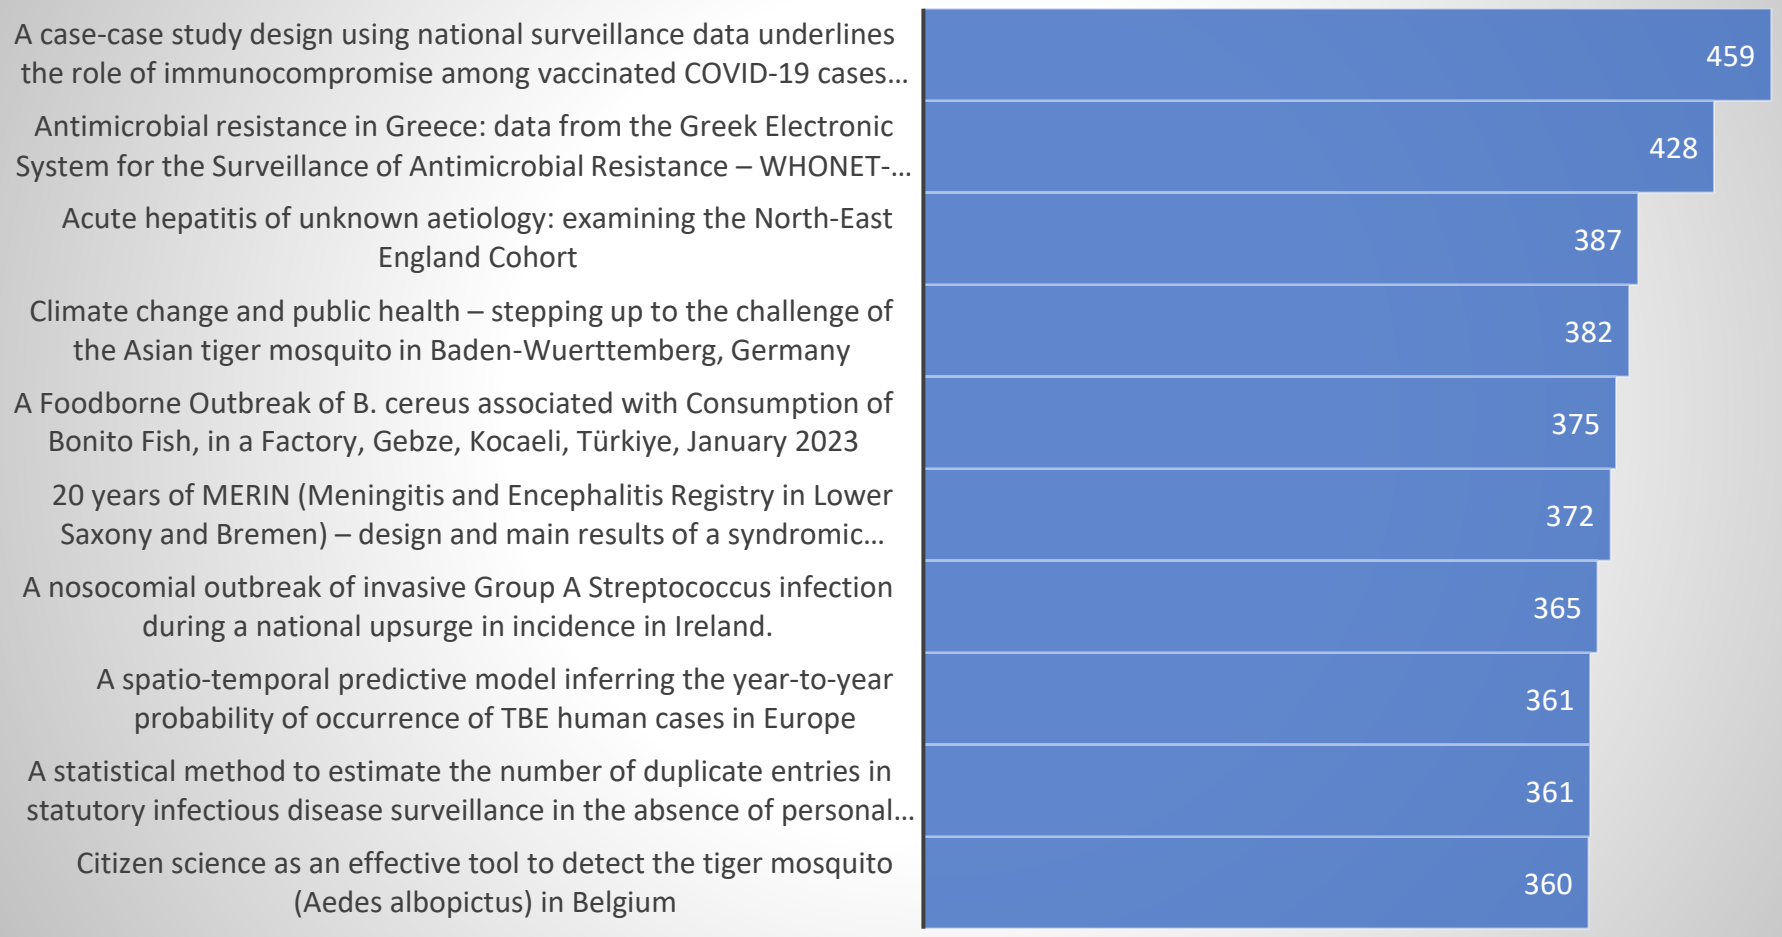
Poster tours

ONLINE views



Posters

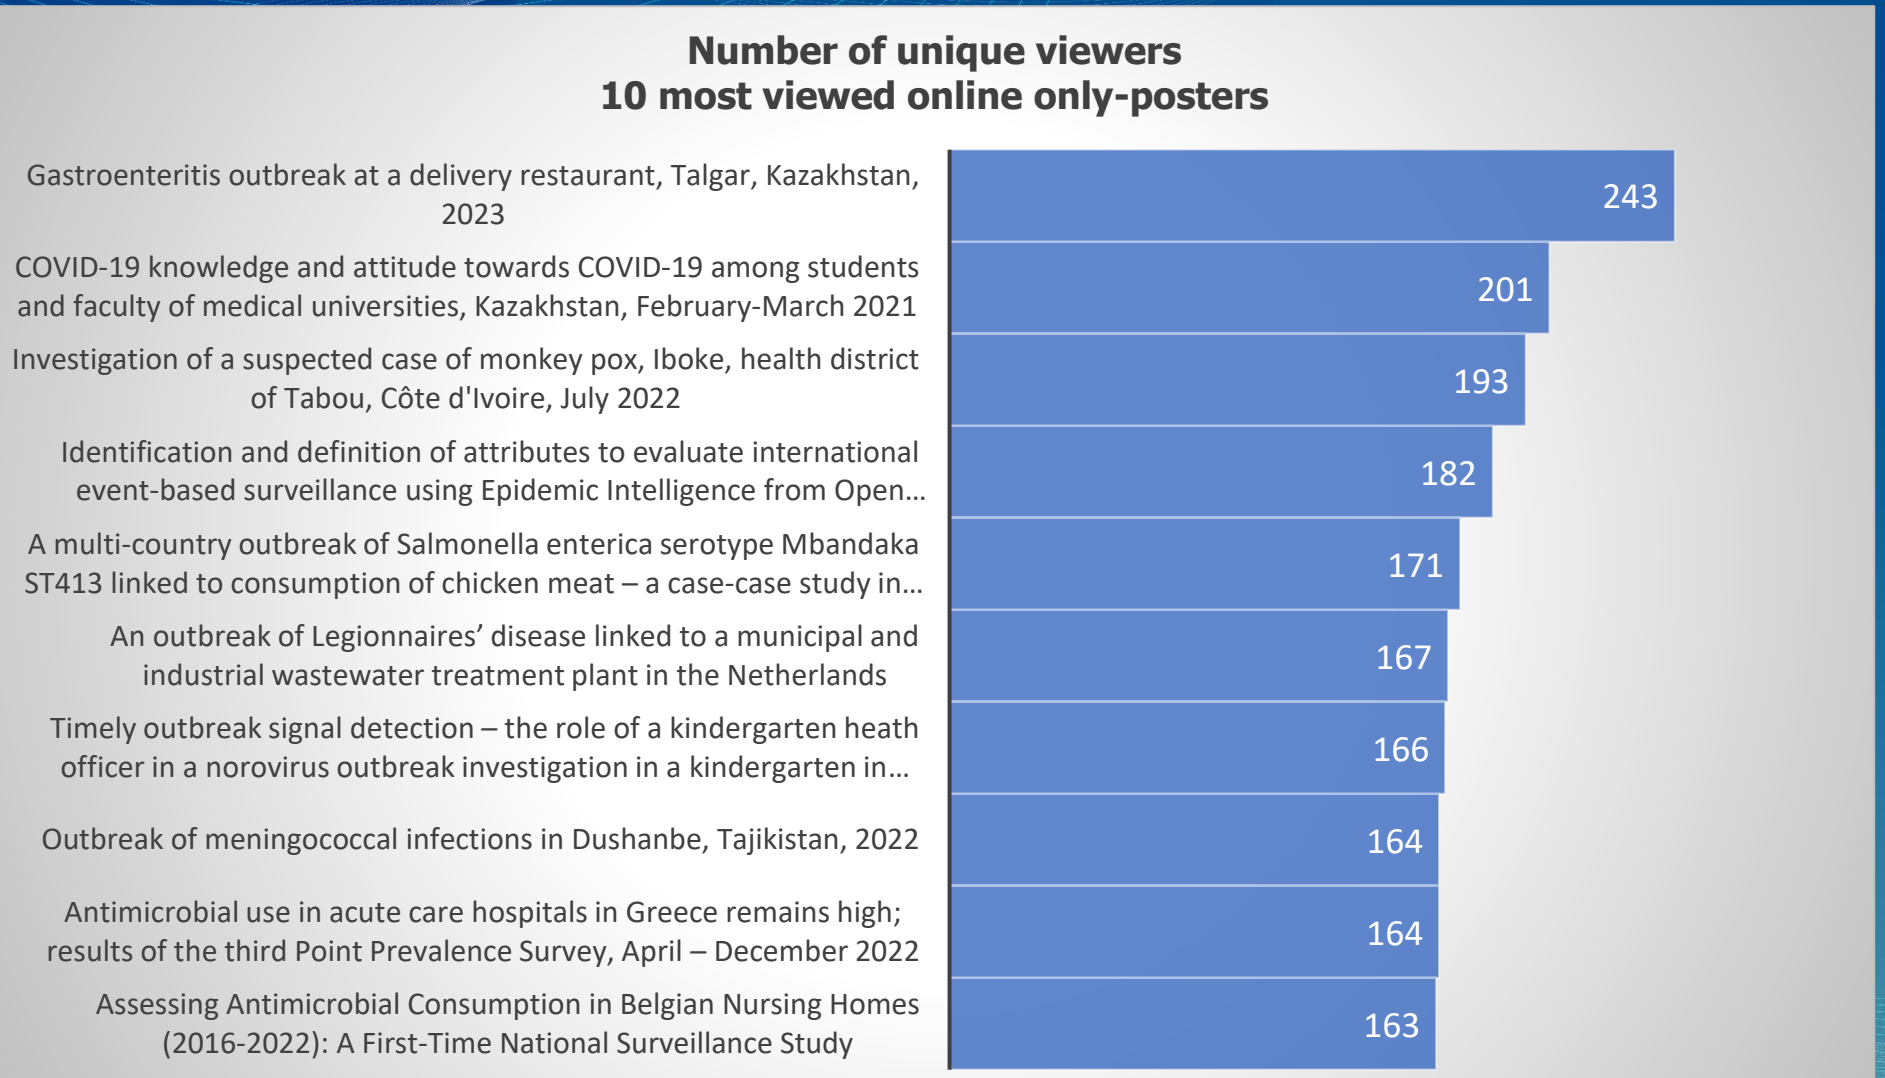
ONLINE views



In total 144 posters were presented in poster tours and also exhibited online, receiving in total 37053 online views during the three days of the conference.

Online-only posters

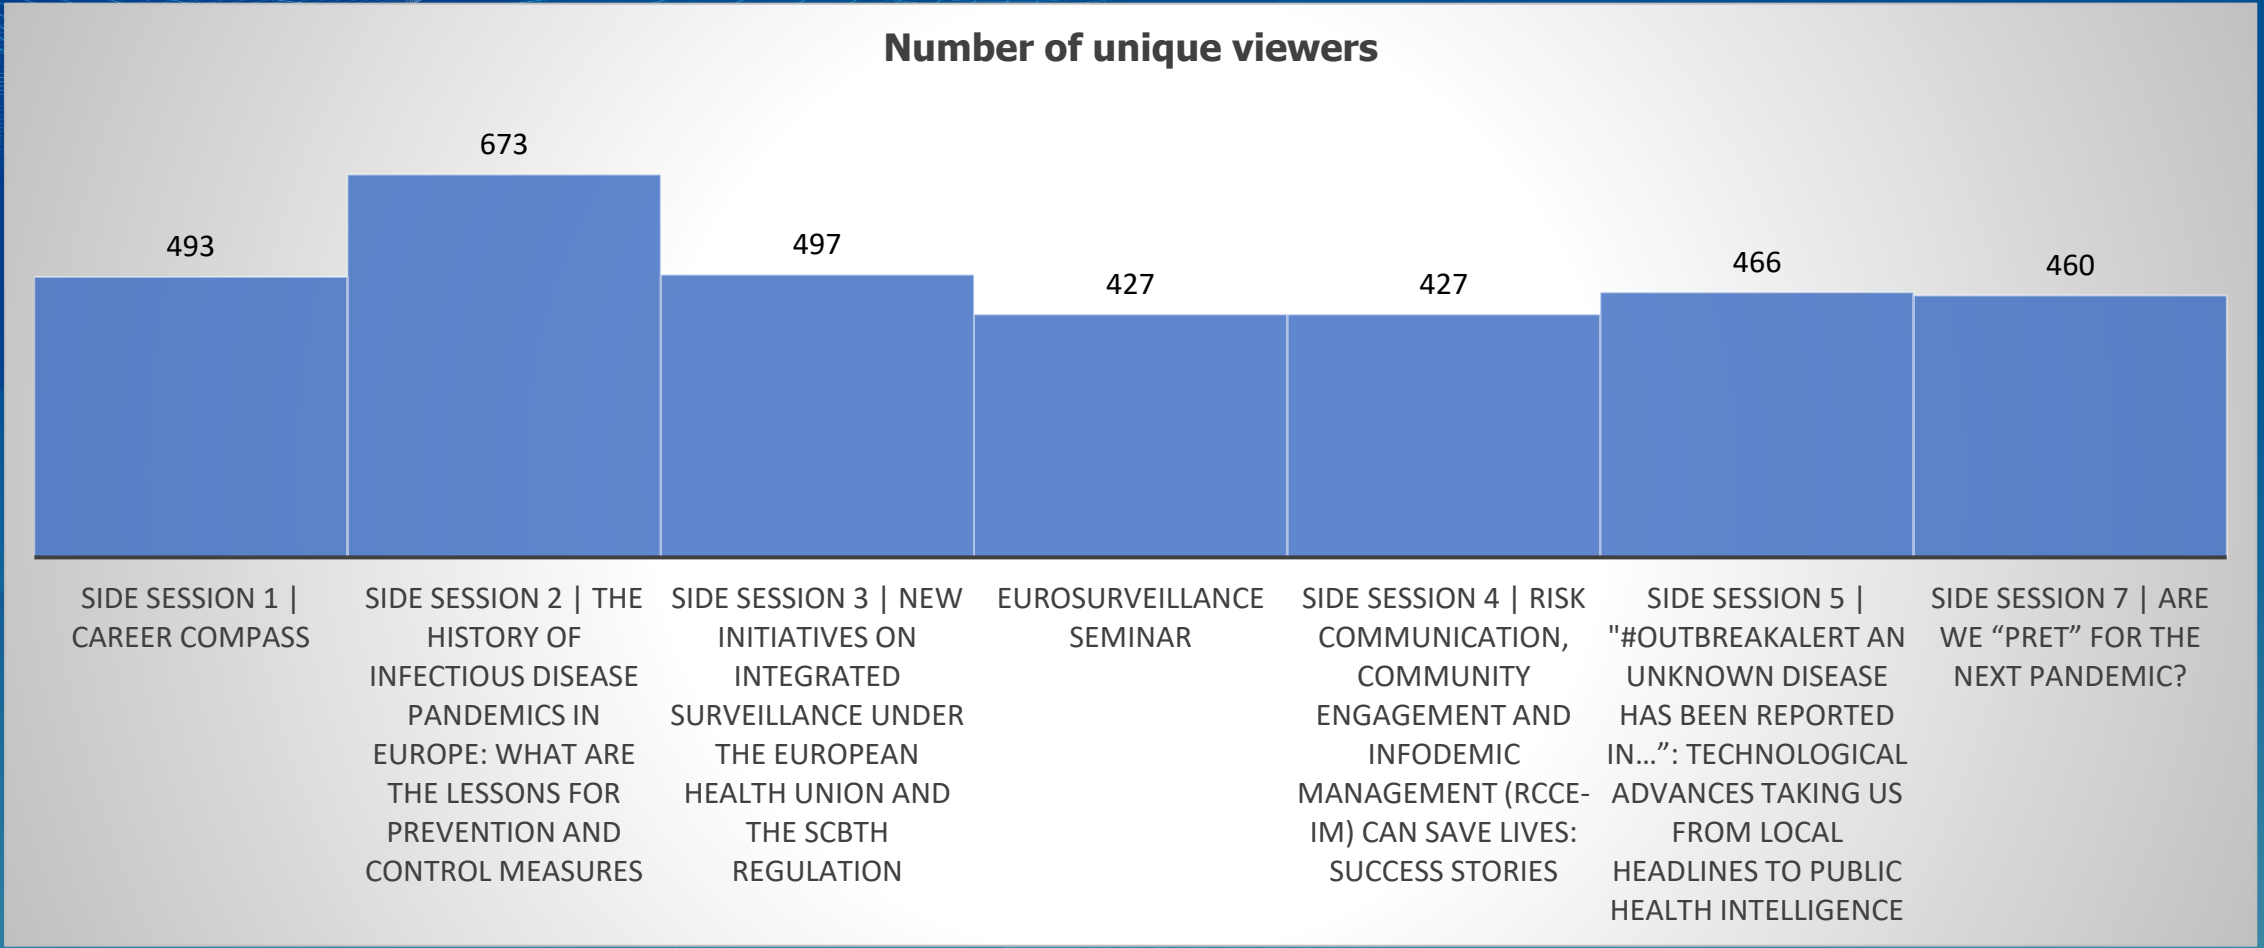
ONLINE views



In total, 59 posters were only exhibited online, and received in total 9828 online views during the three days of the conference.

Side sessions

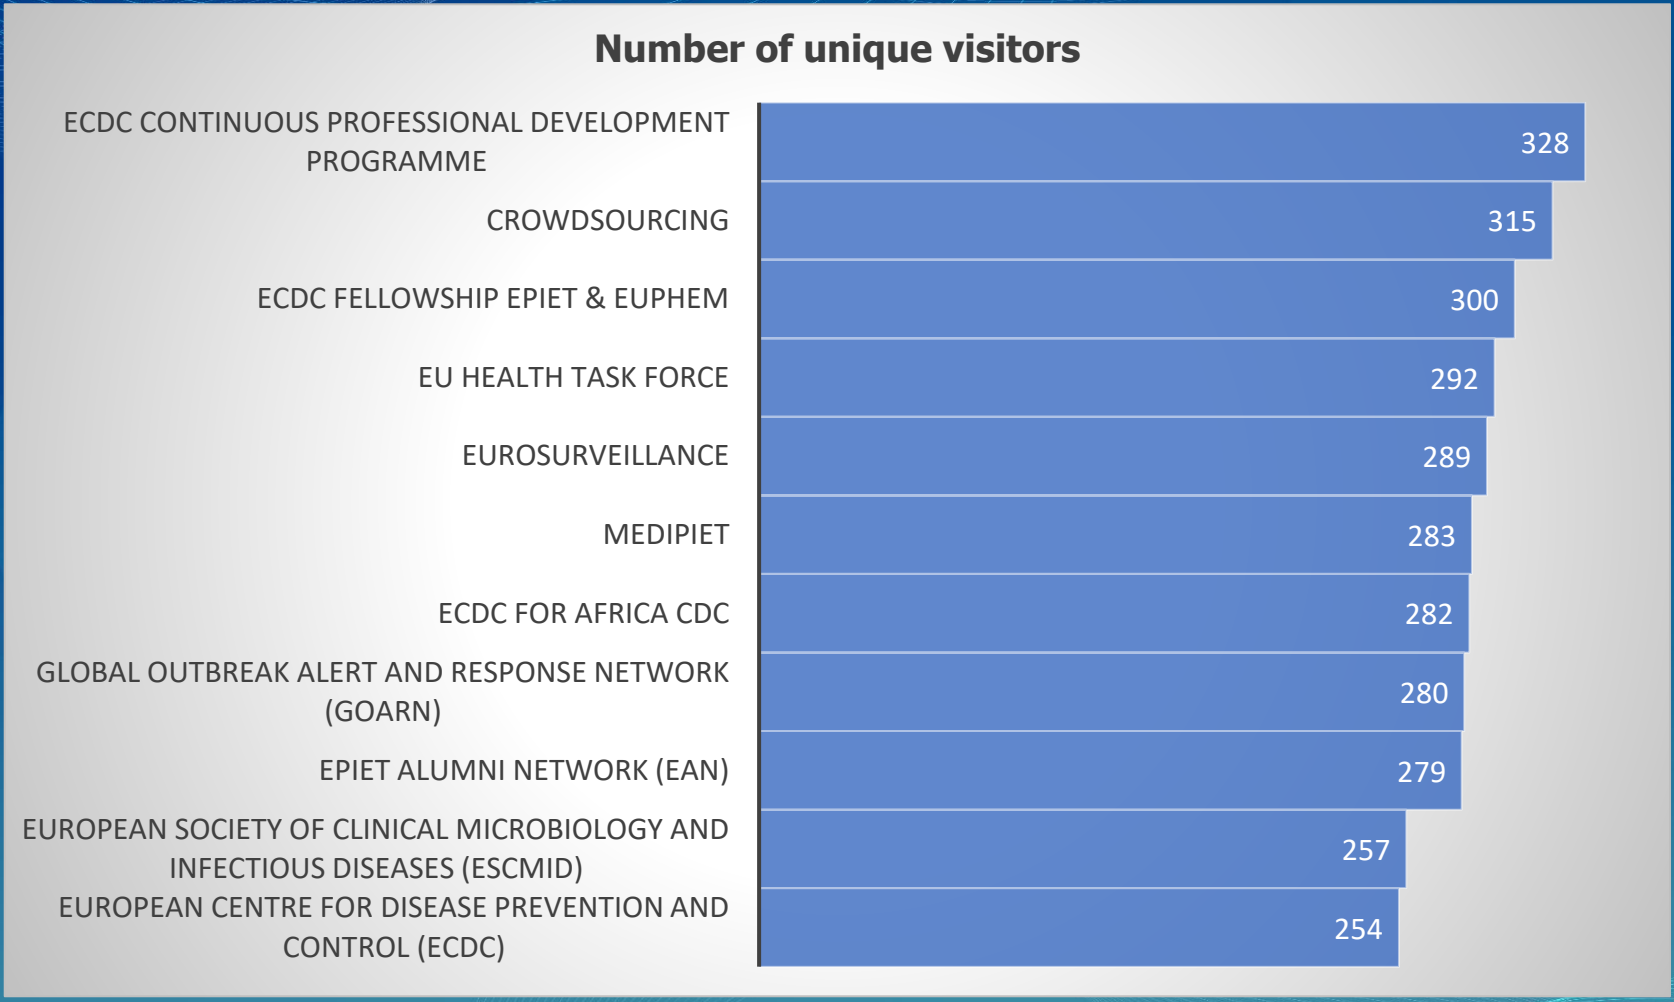
ONLINE views



Side sessions were conducted in a hybrid format, accessible online through the web and mobile app or in person. However, Side Session 6: Escape Room, the "Recharge session: Follow the science follow the song" and the "BarCamp" were exclusively in-person events and therefore are not included in this online listing.

Info stands

ONLINE views

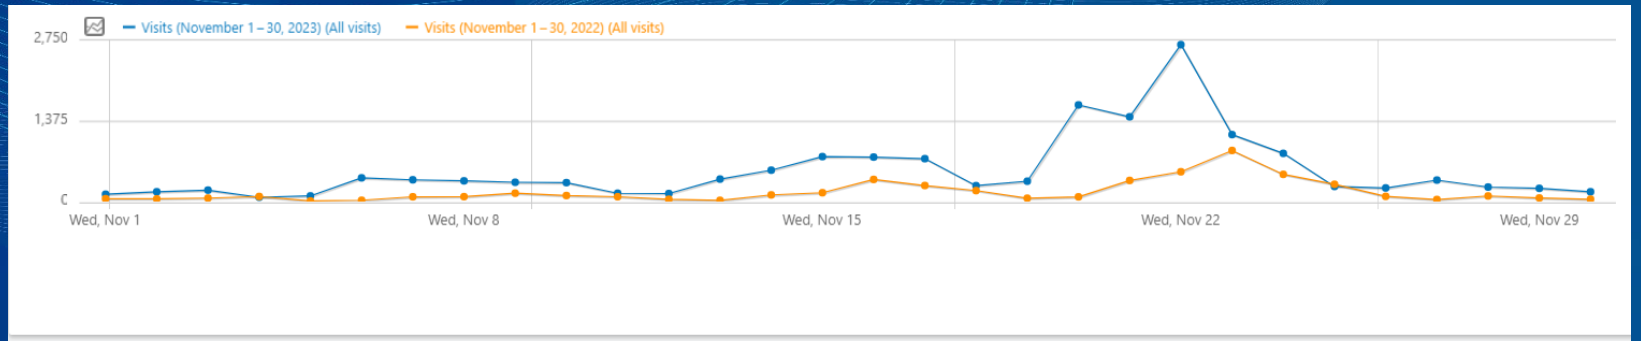


Exhibitors of info-stands could display their work at the conference both on-site at the information stand area and through the online platform.

The chart shows the total number of online visitors to the info-stands. We don't have data for in-person visits, as this is monitored by the individual info-stand owners.

Website and social media

Website usage



In November 2023, there was an **increase of 241.8% in page views*** on the ESCAIDE website compared to November 2022. Most visitors came from Spain (3200), UK (1269), Germany (1066) and Sweden (895).

Interesting news from the German public health authorities #ESCAIDE2023 - an outbreak of botulin intoxication following injection of botulin toxin into the stomach wall (a controversial procedure I had never heard about, with the aim of inducing satiety and weight loss)

"The success of the campaign against coronavirus has reinforced confidence in vaccines in Spain"

by Eliza Houghton — November 24, 2023 in Sports 0

The way out of the biggest health crisis of the last century, however, began to take shape in those late spring days on the seventh floor of the Ministry of Health headquarters, where the Vaccination Programs Area took the first steps that would establish the bases of the future Covid-19 Vaccination Strategy. If Spain had been one of the worst-off countries in the first chapter of the pandemic, the results obtained in that campaign soon shone on the international scene and placed the country among those that managed to immunize the population the fastest. 92.6% of those over 12 years of age completed the vaccination schedule, a percentage that was close to 100% among those over 80 years of age. Covid-19 vaccination in Spain, a success story is the title of the work now presented at ESCAIDE, the congress organized by the European Center for Disease Control (ECDC) that is being held this week in Barcelona.

Major E. coli and other UK outbreaks in focus at ESCAIDE

By Joe Whitworth on November 29, 2023

More details have been shared about a major E. coli outbreak linked to salad and other past incidents in the United Kingdom.

Presentations at the European Scientific Conference on Applied Infectious Disease Epidemiology (ESCAIDE) covered a large E. coli outbreak in the UK and other epidemics caused by Shigella and Salmonella.

Feedback survey

Feedback from participants collected via online survey from 24 November to 11 December

Feedback survey results

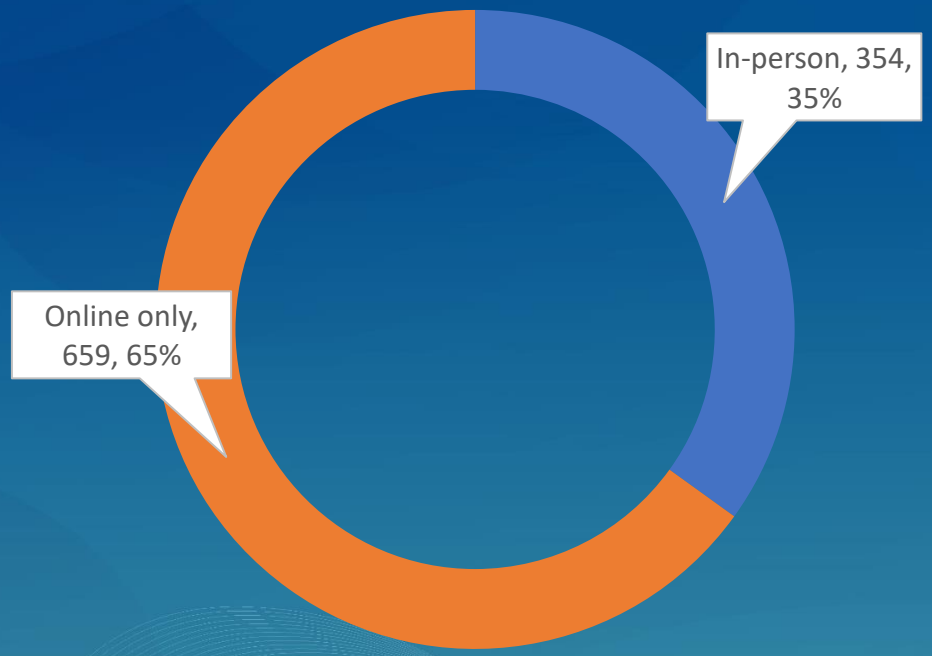
Two email invitations and a notification to complete the survey reached out to 3780 registered participants, of which 1013 completed the survey, from 24 November until 11 December.

The reponse rate was 27%, slighly higher than for ESCAIDE 2022 (25%).

Duplicate survey submissions were flagged by some respondents, these were identified and removed from the respondent data.

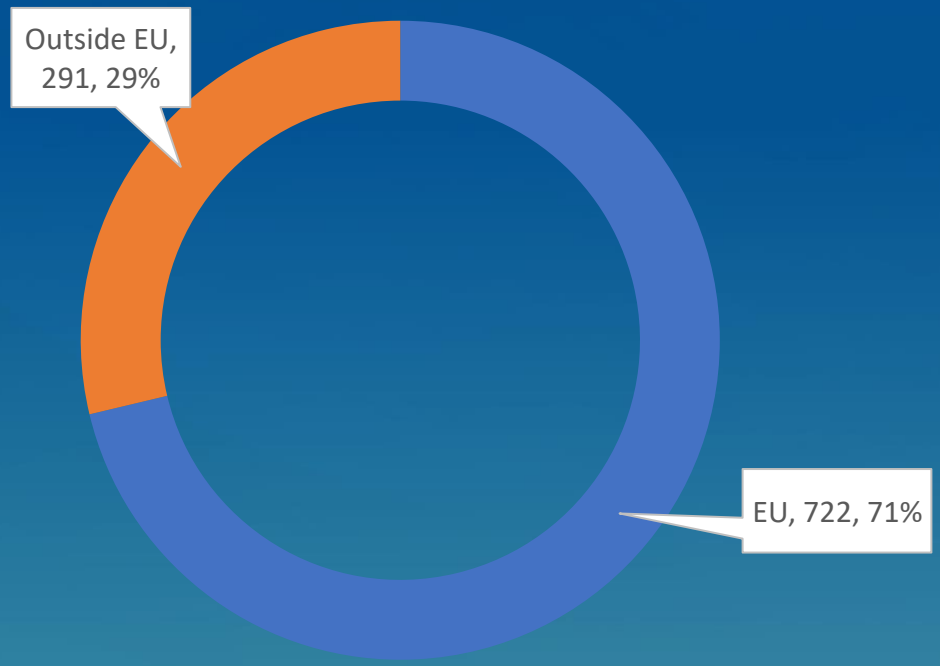
1. How did you attend the conference this year?

Type of attendance of respondents



2. Where do you currently work?

Location of respondents



n=1013

Feedback survey results

5. Overall, how satisfied are you with ESCAIDE 2023?

The results of the feedback survey were once again overwhelmingly positive. 93% of respondents indicated they were 'extremely' (356 responses) or 'very much' (585 responses) satisfied with the event.

The 'Somewhat' and 'Not at all' categories had minimal representation, with only 70 and 2 responses respectively, indicating that dissatisfaction was very low among participants.

The overwhelming majority of positive responses reflects well on the conference's ability to deliver a fulfilling experience, for its online and onsite audiences.

The respondents were invited to add anything they liked or disliked about the conference and identify areas for improvement in free text questions. Additionally, those who had an active role at ESCAIDE (e.g. reviewers, presenters, moderators, etc.) were asked to comment on their experience. In total, 637 comments were received.

The responses were categorised according to which aspect of the conference they referred to, grouped by similar comments and summarised with verbal qualifiers according to frequency. In the next pages, we highlight comments that show the general perceptions of attendees, and include some comments made by a few respondents that expressed certain areas of interest.

Feedback survey results

13. What did you LIKE about ESCAIDE 2023, and would like us to continue with in future conferences? What did you DISLIKE about ESCAIDE 2023, and how could we improve it?

	LIKE	DISLIKE
Conference (general)	• Free admission • Hybrid format • Continuous professional development opportunities • High-quality research • Up-to-date information • Valuable networking opportunities • Location in southern Europe • Sustainability (hybrid, recyclable materials, reusable mug)	• Need for more networking events • Scheduling overlaps • Many ECDC experts not present in-person • Conference still feels too epi- and EPIET-centric • In-person registrations closed too early and many did not manage to attend in-person
Programme (general)	• Diversity and relevance of topics • Programme free of commercial interests • Inclusivity for students and young professionals • Suitable for beginners and experienced professionals • Appreciation for social sciences topics	• Some sessions felt rushed • Some moderators did not keep sessions on schedule • Concurrent sessions in the programme • Desire for more specialised topics and practical sessions • Desire for topics more related with prevention • Discussions too epidemiology-centered • Better representation of microbiology needed

Feedback survey results

13. What did you LIKE about ESCAIDE 2023, and would like us to continue with in future conferences? What did you DISLIKE about ESCAIDE 2023, and how could we improve it?

	LIKE	DISLIKE
Plenaries	• Dynamic speakers • Engaging and current topics • Broad perspectives and expertise • Good balance of discussion time • Special mentions to the focus on the post-pandemic workforce, AI, wastewater surveillance, and One Health. • Special mentions to Kateřina Šédová's presentation in the Prevention plenary.	• Plenaries too generic or lacking depth • Desire for more engaging formats
Fireside sessions	• Timing and interaction • Relevant and diversified topics presented • Broad topics • Interactive and good for networking • Inclusion of diverse perspectives • Comprehensive information materials (guidance)	• Not enough focus on practical applications • Too many similar topics in parallel sessions, need for more varied content within each session • Need for more time to discuss methodology aspects • Geographical representation not diverse

Feedback survey results

13. What did you LIKE about ESCAIDE 2023, and would like us to continue with in future conferences? What did you DISLIKE about ESCAIDE 2023, and how could we improve it?

	LIKE	DISLIKE
Poster tours	• Accessibility to a variety of research • Innovation in format • Opportunity to engage with authors • Enjoyable poster tour experience overall • Opportunity for presenting remotely was appreciated • Good organisation and structure of the poster tours Environment conducive to discussion and interaction Opportunity for questions and discussions • Technical support from organisers was smooth • Headphones provided for audio • Online interaction with posters was available for participants. • Positive experience with the conference app	• Insufficient time for presenting work, format felt rushed • Posters should be downloadable per session, and not individually • Some online posters tours ended ahead of schedule • Noise and distractions from other participants made concentration difficult • Technical issues with remote presentations • Moderators not keeping to time, affecting subsequent presentations • Too many sessions running in parallel • Space openness was not ideal despite headphones • Use of the app for questions during poster sessions was not preferred
Online-only posters		• Online-only posters didn't get enough attention • Online posters considered ineffective for in-person attendees • Lack of engagement and questions for online posters • Difficulty in searching for posters by topic • Suggestion that more parallel sessions might accommodate posters better than the online-only format

Feedback survey results

13. What did you LIKE about ESCAIDE 2023, and would like us to continue with in future conferences? What did you DISLIKE about ESCAIDE 2023, and how could we improve it?

	LIKE	DISLIKE
Side events	• Professional development opportunities • Enriching and impactful discussions BarCamp and Career compass were particularly appreciated, as well as the singing along session. • Appreciation for the more active options like the guided tour of the Museum and the Escape Room	• Clashing with other sessions • Need for more time slots • Desire for more emphasis on side events, including more practical sessions such as workshops • BarCamp felt less inclusive and very EPIET focused
Speakers (general)	• Relevance • Diversity of presenters • Gender balance • Accessibility for non-native English speakers	• Speakers' delivery could be improved • Some speakers did not respect time • Need for a more diverse geographical distribution • More young and local speakers desired • Text packed slides • Strong light on stage made it difficult for speakers to see the audience

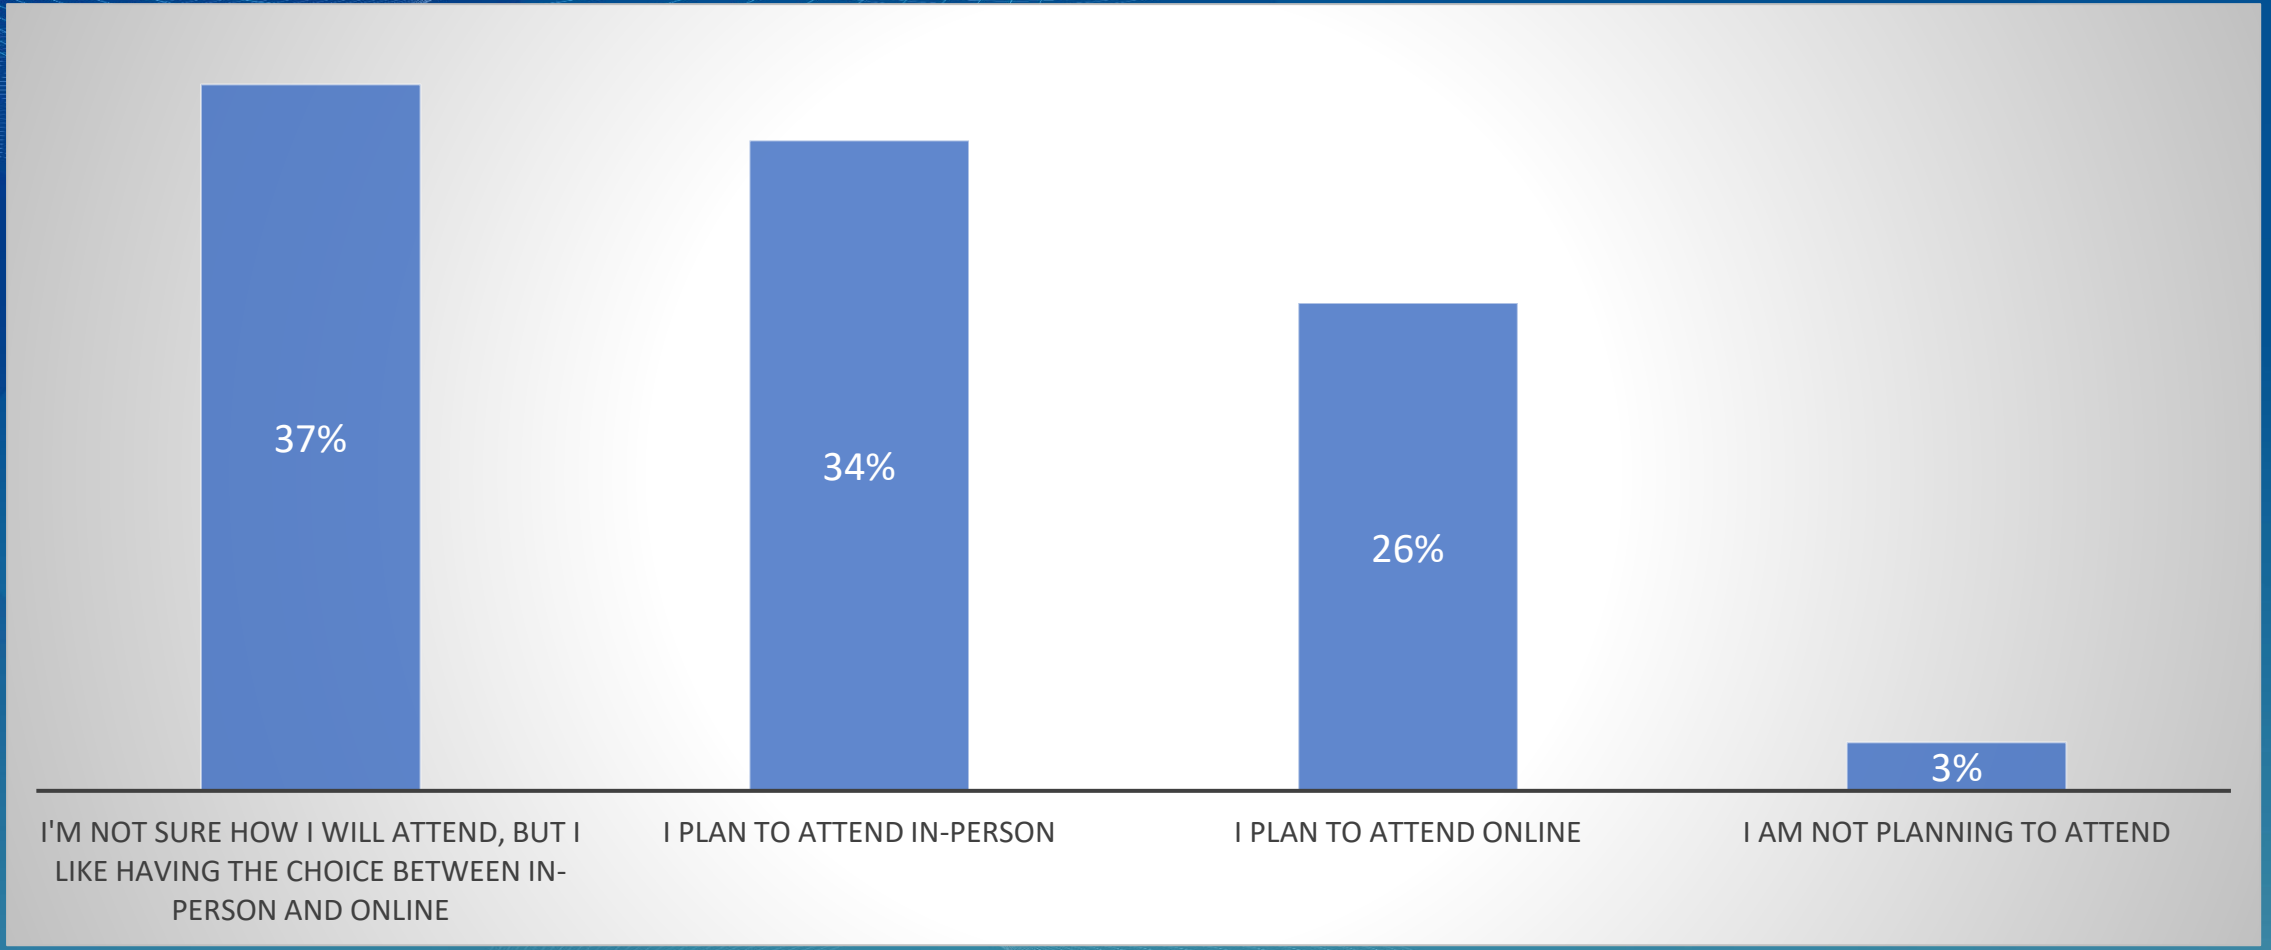
Feedback survey results

13. What did you LIKE about ESCAIDE 2023, and would like us to continue with in future conferences? What did you DISLIKE about ESCAIDE 2023, and how could we improve it?

	LIKE	DISLIKE
Hybrid format	• Live transmission of content was highly praised • Accessibility of recordings • Appreciated for inclusivity and environmental benefits • Ease of participation without travelling • Quality of online sessions	• Desire for more online networking opportunities • Need for more technical support for remote participants
App	• User-friendly • Facilitated hybrid format • Easy access to presentations • Availability of session recordings	• Difficult to use • Glitches and streaming issues • User-friendliness needs improvement
Catering and venue	• Catering • Running tea and coffee throughout the day • Location in Barcelona – affordable and easy to access • Spacious venue • Reusable mug offered	• Queues at the opening on day 1 • Lack of more healthy food options • Insufficient dietary labels • Main stage was too dark • Limited toilet facilities • Need for clear health and safety recommendations • Venue closed at 20.00 which was perceived as too early, in particular after the BarCamp

Feedback survey results

14. ESCAIDE 2024 is planned to be held in Stockholm, from 20 to 22 November. To what extent do you agree with the following statements about ESCAIDE 2024?



Feedback survey results

Conclusions (Overall)

The respondents were asked about their agreement with a set of statements related with the conference. They could choose the extent to which they agree with the statements by selecting 'extremely', 'very much', 'somewhat', 'not much' or 'not at all'.	
Satisfaction	There were overwhelmingly positive results. 93% respondents were 'extremely' or 'very much' satisfied with the conference. The overall results of the survey showed that the respondents were highly satisfied with all aspects indicated.
Topics, content and networking	A very large majority of respondents 'extremely' or 'very much' agreed that ESCAIDE topics were relevant to their work (91%), that the programme and speakers were of high quality (95%), that the event fulfilled their educational goals and expectations (94%), that what they learned would be implemented in their practice (67%), that the content was well supported by scientific evidence (95%), that ESCAIDE created opportunities to establish meaningful connections and network (77%) and that the programme was free of commercial and other biases (95%).
Format aspects	There were very positive results overall, over 85% of respondents were either 'extremely' or 'very much' satisfied with most of the format aspects of the conference, such as the time allocated to Q&A (87%), the role of the Master of Ceremonies (91%) and the usage of polls (85%). A slightly lower satisfaction rating was with only being able to ask questions online, where about 79% of respondents were 'extremely' or 'very much' satisfied, and 20% of respondents were only either 'somewhat' or 'not much' satisfied with this aspect of the conference.
Organisational aspects	Immensely positive results overall, indicating a high satisfaction, where respondents 'extremely' or 'very much' agreed with the organisational aspects of the conference, in particular the fact that no registration fees were collected (96%), the implementation of the hybrid event (94%) and the organisation/organisers (96%). The venue and the catering scored slightly lower than the other criteria, with 87% and 77%, of the respondents being 'extremely' or 'very much satisfied with these aspects, respectively. The conference's timing in the Autumn-Winter season and Barcelona as the host city were also well-received, with 83% and 85% of respondents indicating strong satisfaction.

Feedback survey results

Conclusions (Overall)

To assess the quality of the sessions, participants could choose one of five aspects to best describe different events at ESCAIDE: 'improved my knowledge', 'useful for my work', 'not relevant', 'didn't like', or 'didn't attend'.	
Plenary sessions	There were very positive results overall. Most respondents rated the plenary sessions highly in terms of improving their knowledge and being useful for their work. Only 2-5% of respondents either disliked these sessions or did not find them relevant to their work. The main quality the participants indicated was 'improved my knowledge' (in particular for Plenaries B and C), followed by 'useful for my work' (slightly higher for Plenaries A and E).
Abstract sessions	There were very positive results overall. Most respondents rated the abstract-led sessions highly in terms of improving their knowledge and being useful for their work. Only 4-8% of respondents either disliked these sessions or did not find them relevant to their work.
Side-events	There were very positive results overall, with varying levels of participant engagement and perceived value. Most respondents rated the side-events highly in terms of improving their knowledge and being useful for their work. Only 2-10% of respondents either disliked these sessions or did not find them relevant to their work.

Feedback survey results

Conclusions (Overall)

The respondents were asked about their agreement with a set of statements related with the conference. They could express the extent to which they agree to the statements by choosing 'extremely', 'very much', 'somewhat', 'not much' or 'not at all'. A neutral option 'I don't know' was also offered.	
Web and mobile app	The web and mobile app was generally well received by respondents. Most participants 'extremely' or 'very much' agreed that the app facilitates access to conference information (83%), and that it was user friendly (81%). There was less agreement on their preference for asking questions only through the app and on the networking opportunities offered by the app, where only 59% were 'extremely' or 'very much' satisfied with this aspect and about 23% responded that they were only 'somewhat' or 'not much' satisfied with this aspect. About 14% of the respondents indicated that they did not know how to assess this aspect, possibly because they have not used the app.
ESCAIDE 2024	When asked about their plans to attend ESCAIDE in 2024, 37% of respondents said they were 'not sure' how they will attend, but they 'like having the choice between in-person and online'. 26% responded that they plan to attend in person and 37% plan to participate only online. 3% indicated they are not planning to attend ESCAIDE 2024.
Overall results	The majority of respondents expressed extreme satisfaction with the event's topics and content, finding the sessions relevant and informative. The programme was particularly praised for its impartiality and the absence of commercial influence, along with the appreciated policy of not charging for attendance. Additionally, the web and mobile app, and the availability of session recordings were highly valued for its convenience. Overall, positive feedback far outweighed any negative responses, with many attendees expressing willingness to participate in ESCAIDE 2024.

Feedback survey results

Conclusions (Open text comments)

The respondents were invited to add anything they liked or disliked about the conference and identify areas for improvement in free text questions.	
Programme and content	The general program of the conference was well-received for its diversity and relevance of topics, maintaining a non-commercial focus. However, feedback suggested that some sessions felt rushed and lacked in-depth content, with a desire for more specialized topics and practical sessions. Plenaries were highlighted for their dynamic speakers and engagement with current issues, providing broad perspectives and expertise, along with a balanced discussion time. Nonetheless, some respondents desired more depth and engaging formats in plenaries. Side events offered valuable professional development and were impactful, with sessions like BarCamp and the Singing along session being memorable. Nevertheless, the schedule of some sessions clashed with others, and there was a desire for more time slots and emphasis on these events, as well as for more inclusivity beyond a specific focus on the EPIET community.
Posters	Poster tours provided accessibility to a range of research, with the overall experience being well-regarded. The ability for remote presentation was appreciated, yet attendees felt the presentation time was insufficient and the format too rushed. Concerns were raised about the distractions and technical issues during remote presentations, and the e-poster format's visibility.
Venue and catering	The venue and the catering served were appreciated by many respondents. However, there were calls for more healthy options and better dietary labelling. Other concerns included long queues at the opening, inadequate lighting on the main stage, and early venue closure, particularly after evening sessions, suggesting room for logistical enhancements in future editions.
Overall feedback	The overall sentiment towards ESCAIDE 2023 is largely positive, with attendees commending the quality of the content, free admission, hybrid format, and the opportunities for professional development. While the conference's programme was broadly successful, the feedback points to opportunities for enhancing depth, offering more networking opportunities and revising content presentation formats.

Conclusions

Conclusions

ESCAIDE 2023's hybrid format successfully delivered the conference's key features to a global audience, with registrations from 127 countries totalling 3780, a testament to the online format's ability to overcome traditional barriers such as cost and travel. Despite this, participation from historically underrepresented countries remained low, highlighting an opportunity for further outreach in future editions.

On-site attendance at ESCAIDE 2023 varied, starting with 786 attendees and then decreasing to 591 and 693 on the second and third days, respectively. Online participation also saw shifts, reaching a high of 2353 virtual attendees on the first day and declining to 1858 by the conference's conclusion. Morning plenary sessions had the highest online engagement, attracting over 1000 virtual attendees, while afternoon sessions saw around 750 online participants. This fluctuation in attendance, both on-site and online, offers valuable insights for future conference planning.

Regarding conference formats, a significant suggestion emerged for revisiting the poster presentations. There was a consensus to discontinue the online-only posters, primarily due to their reduced visibility and engagement among attendees. Additionally, there was feedback suggesting the removal of the hybrid component from the poster tours. This aspect was perceived to add complexity without a proportional benefit in terms of attendee interaction and learning outcomes.

Active engagement was evident through the lively discussions in session chats, reflecting a well-connected community. Feedback from the post-conference survey was overwhelmingly positive, yet it is important to note that these insights represent only the surveyed attendees and may not encompass the broader participant perspective.

Overall, organising ESCAIDE is a collaborative endeavour. The behind-the-scenes efforts were immense, with meticulous planning and adaptation from past learnings to ensure seamless technical execution and enriched interactions, a foundation we will continue to build on.

The prevailing sentiment across all participants appears to be that ESCAIDE is a highly-regarded and much-anticipated opportunity for public health professionals across Europe and the world to come together to discuss the advancements of their field, but also to connect and engage with colleagues on a personal level. As ESCAIDE continues to grow and evolve from year to year, it is important that these qualities remain at its core, while continuing to deliver scientific quality through its programme

Special Acknowledgments

This year's ESCAIDE was distinguished by the exceptional partnership with our host country, Spain. We extend our heartfelt thanks to Jacobo Mendioroz from the Catalan Public Health Agency for his vital role in the Scientific Committee, to Esteve Saltó Cerezuela for expertly handling the pre-conference organisation and media relations, and to Berta Suarez for her coordination within the Spanish Ministry of Health. We are also very grateful to our hosts for enriching the conference with additional experiences, such as the guided tours at the MNAC and the engaging Escape Room event. Special recognition is due to Fernando Simón and Carmen Cabezas from the Spanish Ministry of Health and the Catalan Public Health Agency, respectively, for their outstanding support and the resources provided by their teams.
